Contents

Preface	7
1 Introduction	9
1.1 Crystallographic orientation measurements	10
1.1.1 Short history of orientation measurements	10
1.1.2 The object of interest: Crystallographic orientations and how they behave	13
1.1.3 The measurement method and its problems	18
1.2 Mathematical terminology	21
1.2.1 Parametrisations of orientations	21
1.2.2 Orientation density function (ODF)	23
1.2.3 Pole density function (PDF)	24
1.2.4 Harmonic functions on $SO(3)$ and S^2	24
1.2.5 Texture index and texture entropy	27
1.3 Statistics	28
1.3.1 Purpose, objective and methods	28
1.3.2 The three sampling situations	28
2 Spatial statistics for linear functionals	31
2.1 Linear functionals of the ODF	31
2.1.1 Estimation error with a sparse measurement grid	32
2.1.2 Non-indexing corrections	33
2.1.3 Calculating the number of measurements required	33
2.2 Correlation model from geostatistics	34
2.2.1 Modelling stochastic dependence	34
2.2.2 The stationary correlation model	35
2.2.3 Estimation of the covariance function and its general problems not typical for texture data	38
2.2.4 Estimation of the estimation variance in the presence of spatial correlation	42
2.2.5 Details: Limiting distribution of the estimate	48
2.3 The grain model	52
2.3.1 Number of measurements per grain	52
2.3.2 Variance calculation	53

2.3.3	Variance estimation	53
2.3.4	Reducing the number of measurements required	55
2.3.5	Application to multi phase material	56
2.3.6	Details: Limiting distribution of the estimate	56
2.4	Applications	56
2.4.1	Estimation of C -coefficients	56
2.4.2	Estimation of property tensors	62
2.4.3	Estimation of the texture index	65
2.4.4	Estimation of volume fractions	67
2.4.5	The simple approach to ODF-estimation	68
2.5	Spatial coherence functions	70
2.5.1	The disorientation correlation function (DCF)	70
2.5.2	Total orientation variograms	70
2.5.3	How to use spatial coherence functions	71
2.6	Conclusions for linear statistics	71
3	Standard orientation density functions	73
3.1	Unimodal density models	73
3.1.1	Rotational Brownian distribution	73
3.1.2	Von Mises-Fisher matrix distribution	74
3.1.3	Orientation densities depending on the rotation angle only	76
3.1.4	Modelling ODFs with more than one preferred orientation	77
3.2	Crystallographic exponential family (CEF)	77
3.2.1	Definition of CEF	77
3.2.2	Properties of CEF	78
3.2.3	Modelling special textures using CEF	80
3.2.4	The three canonical characterisations	81
3.3	Simulation of CEF distributions	82
3.3.1	Rejection sampling	82
3.3.2	A method with provision for large samples	83
4	Kernel density estimation	85
4.1	How kernel density estimation works	85
4.1.1	Introduction	85
4.1.2	Definition of kernel density estimations for orientations	86
4.1.3	Adjusting for sample symmetry	87
4.1.4	C -coefficients	88
4.1.5	What do we estimate with measurement errors?	89
4.2	The estimation error	90
4.2.1	Expected squared estimation error	90
4.2.2	Estimation of the texture index	92
4.2.3	Estimation error in the grain model	92
4.3	Confidence intervals	93

4.3.1	Tschebyscheff pointwise confidence intervals	94
4.3.2	Normal approximation pointwise confidence intervals	94
4.3.3	The joint confidence band	96
5	Parametric statistics	101
5.1	Parametric statistics with one sample	101
5.1.1	Maximum likelihood estimation	102
5.1.2	Estimation error	103
5.1.3	Dealing with small measurement errors	104
5.2	Tests	104
5.2.1	The general test problem	104
5.2.2	Likelihood ratio test	105
5.2.3	Testing in case of the grain model	105
5.2.4	Testing in case of the stationary correlation model	106
5.2.5	Univariate models	109
5.3	Texture regression	111
5.3.1	The general ideas of texture regression	112
5.3.2	Generalising R^2	113
5.3.3	Building dependence models	115
5.3.4	Texture regression tables	117
5.3.5	Texture gradients	119
5.3.6	Diagnostic statistics	119
5.3.7	Outlook: Possible extension	121
5.4	Outlook: Spatial interaction of grains	122
5.4.1	Dependence on the grain shape	122
5.4.2	Depending on the orientation of other grains	123
5.4.3	Estimation and testing	123
5.4.4	Conclusions for dependence models	124
5.5	Texture discrimination analysis	125
5.5.1	The scenario of discrimination analysis	125
5.5.2	Estimation of mean and variance	125
5.5.3	Estimation of a-posteriori probabilities	127
5.6	Inverse regression for parameter estimation	129
5.7	Parametric statistics: Conclusions	130
6	Conclusions and Outlook	133
6.1	The general task	133
6.2	Basic ideas	133
6.2.1	The scale of crystallographic orientations	133
6.2.2	Variance estimation in presence of spatial dependence	133
6.2.3	Crystallographic exponential family and texture regression	134
6.3	Results	134

A	Short introduction of tools	137
A.1	Spherical and rotational harmonic functions	137
A.2	Probability and moments	141
A.2.1	Random variables	141
A.2.2	Mean, variance, covariance	142
A.2.3	Calculating with moments	143
A.3	Generating orientations with uniform distribution	143
A.3.1	Simulation in Euler angles	143
A.3.2	Simulation in Rodrigues parameterisation	143
A.4	Numerical integration of ODFs	143
A.4.1	Monte Carlo method of integration	144
A.4.2	Euler space method	144
	Bibliography	145
	List of Figures	151
	List of Symbols	153
