

Thermal and Electromagnetic Modeling of a Canned Switched Reluctance Machine

Von der Fakultät für Elektrotechnik und Informationstechnik
der Universität der Bundeswehr München

zur Erlangung des akademischen Grades eines
Doktor-Ingenieur
(Dr.-Ing.)

genehmigte Dissertation

von

M.Sc. Qiang. Yu

Acknowledgements

This research work has been carried out during the years 2008-2012 in the Institute of Electrical Drives and Actuators in Universitaet der Bundeswehr München, Neubiberg, Germany.

First, I would like to express my gratitude to my supervisor Prof. Dr.-Ing. Dieter.Gerling, for his invaluable guidance throughout the work and his provision with a high degree of academic freedom. His suggestions and encouragements are always giving me novel directions and enormous impetus.

Also, I would like to express my gratitude to the committee of this thesis, Prof. Dr.-Ing. Wilfried.Pascher and Prof. Dr.-Ing. Ekkehard.Bolte, for their support and advice.

To all staff in the institute during these years, I wish to send my warmest thanks for the friendly atmosphere, in which I had a meaningful and fruitful time.

In addition, I would like to thank Dr. Sven.Urschel from KSB Aktiengesellschaft, for his close cooperation and understanding. The financial support is gratefully acknowledged.

I would like to thank Chinese Scholarship Council (CSC) for granting me the highly competitive scholarship and Institute of Electrical Drives and Actuators, Universitaet der Bundeswehr Muenchen and Forschungszentrum für Elektrische Antriebstechnik und Aktorik München GmbH (FEAAM) for giving me financial support during my study in Germany.

Finally, I would like to thank my wife Linna.Huang for her love, understanding and support these years. Thanks also to my mother Kaimin.Fan, for her love and support during the past decade when I was away from home to study and work.

Neubiberg, 01.23.2012

Contents

1	Introduction	1
1.1	Background.....	1
1.2	Operational principle of SRMs.....	2
1.3	Configuration of SRMs	4
1.3.1	The number of phases and poles.....	4
1.3.2	The can partition	5
1.3.3	The material	5
1.4	Outline and contributions of the thesis.....	6
2	Geometry design of an ordinary SRM	9
2.1	Introduction	9
2.2	The estimation principles	10
2.2.1	The teeth geometry	10
2.2.2	The yoke thickness	12
2.2.3	The winding parameters	13
2.2.4	Control parameters.....	14
2.3	The designed SRMs.....	17
2.4	Analysis and verification by FE method	18
2.5	Conclusion	21
3	An improved lumped parameter thermal model	23
3.1	Introduction	23
3.2	The improvement by compensation elements.....	23
3.3	The Thermal network	24
3.3.1	The heat source	25
3.3.2	Thermal resistances between components.....	25
3.3.3	The compensation elements.....	32
3.3.4	Model of windings.....	35
3.3.5	Thermal resistances and compensation elements from a coil	36
3.3.6	The machine end part	41
3.4	Results and discussion.....	41
3.4.1	The thermal network with compensation	42
3.4.2	Comparison with FE method.....	45

3.5	Sensitivity analysis	46
3.5.1	The frame convection	46
3.5.2	The slot convection.....	47
3.5.3	The cooling liquid.....	47
3.5.4	The winding uncertainty.....	48
3.6	Conclusion.....	49
4	Loss analysis of a canned SRM.....	51
4.1	Introduction	51
4.2	The calculation principle of iron loss	52
4.3	Model of iron loss.....	53
4.3.1	Eddy current loss	53
4.3.2	Hysteresis loss	54
4.3.3	Results and discussion.....	56
4.4	Can loss analysis.....	58
4.4.1	Overview.....	58
4.4.2	The can loss factors	59
4.5	Conclusion.....	65
5	The MMF modeling for concentrated windings	67
5.1	Introduction	67
5.2	The model of phase current	68
5.3	The winding function	70
5.4	Model of one coil (Model 1)	71
5.4.1	Model of a single turn.....	72
5.4.2	Model of all turns in a layer of a coil	74
5.4.3	Model of all layers in a coil.....	78
5.5	Model of a coil (Model 2)	79
5.6	The coil distribution	81
5.7	Results and discussion.....	85
5.8	The MMF distribution from axial direction	88
5.9	Conclusion.....	89
6	Analysis of magnetic circuits with highly saturated regions	91
6.1	Introduction	91
6.2	The calculation principle	91

6.3	The air gap reluctance	94
6.3.1	The unaligned and non-overlapping positions	94
6.3.2	The partial overlapping positions	95
6.3.3	The total overlapping and aligned positions.....	96
6.4	Discretizing the machine	96
6.4.1	The unaligned and non-overlapping positions	97
6.4.2	The partial overlapping positions	98
6.4.3	The total overlapping and aligned positions.....	98
6.5	Managing the size of elements	99
6.5.1	The non-overlapping positions	99
6.5.2	The partial overlapping positions	100
6.6	Other considerations	101
6.6.1	The slot leakage	101
6.6.2	The machine end part	102
6.7	The program	102
6.8	Results and discussion.....	103
6.9	Conclusion.....	105
7	Can loss reduction methods.....	107
7.1	Introduction	107
7.2	Loss reduction by making cavities in the teeth	107
7.3	Loss reduction by phase current waveform.....	109
7.3.1	The rate of dropping of phase current	110
7.3.2	The interaction of eddy current from different phases	112
7.4	Controller analysis and improvement.....	114
7.4.1	The current waveform by winding inductance.....	114
7.4.2	The controller design principles	117
7.4.3	Loss analysis in the controller	120
7.4.4	The proposed controller.....	122
7.5	Loss reduction by axial separation	123
7.6	Using longer cans	124
7.7	Loss reduction from the windings	125
7.7.1	The wire diameter.....	125
7.7.2	The wire arrangement.....	126

7.8	Conclusion.....	128
8	Conclusion and future work.....	129
8.1	Conclusion.....	129
8.2	Future work.....	131
	References.....	133
	List of symbols and acronyms.....	139
	Appendix.....	143
	A.1 Discretizing phase current into Fourier series.....	143
	A.2 Discretizing MMF waveform into Fourier series.....	145
	A.3 Sum of coils and phases.....	146
	A.4 The air gap reluctances at non-overlapping positions.....	148
	A.4.1 Path 1.....	150
	A.4.2 Path 3.....	150
	A.4.3 Path 4.....	151
	A.4.4 Path 5, 6 and 7.....	152
	A.4.5 Path 2.....	153
	A.5 Air gap reluctances at partial overlapping positions.....	153
	A.5.1 Path 1.....	153
	A.5.2 Path 2.....	154
	A.5.3 Path 3 and 4.....	154
	A.6 The air gap reluctances at total overlapping positions.....	155
