

D386

**PhD thesis of the
ÉCOLE NORMALE SUPÉRIEURE DE CACHAN
and of the
UNIVERSITY OF KAISERSLAUTERN**

Defended by

Ms. Gaëlle Marsal

to obtain the grades of

**DOCTOR OF THE ÉCOLE NORMALE SUPÉRIEURE
DE CACHAN
and
DOCTOR OF THE UNIVERSITY OF
KAISERSLAUTERN**

In :

ELECTRICAL AND AUTOMATION ENGINEERING

**Evaluation of time performances of
Ethernet-based Automation
Systems by simulation of High-level
Petri Nets**

Defended at Cachan on December, the 11th, 2006 in front of the committee composed of:

HASSANE ALLA	Professor - INPG - LAG	Examiner
STEFAN KOWALEWSKI	Professor - RWTH Aachen University	Reviewer
ERIC RONDEAU	Professor - University of Nancy - CRAN	Reviewer
JEAN-MARC FAURE	Professor - ENS Cachan - LURPA	Advisor
GEORG FREY	Junior Professor - TU of Kaiserslautern - JPA ²	Advisor
BRUNO DENIS	Assistant Professor - ENS de Cachan - LURPA	Advisor
PATRICK SALAUN	Researcher - EDF R&D	Invited

The work that has resulted in this thesis could not have been performed without the support of several people who must be mentioned here.

First of all, I would like to thank my advisors Professor Jean-Marc Faure, Professor Georg Frey and Assistant Professor Bruno Denis for the opportunity to perform my work at their institutes. I thank them for all encouragement, guidance and the necessary intellectual freedom they have given me to fulfil this work. Working in their teams was a privilege and a great experience I will never forget.

I would like to thank the reviewers of this thesis, Professor Stefan Kowalewski from the RWTH Aachen (Germany) and Professor Eric Rondeau from the University of Nancy (France) for the interest they took in my work and the effort they invested in reviewing deeply this thesis. I would also like to thank Professor Hassane Alla and Patrick Salaun for agreeing to participate to the Evaluation Committee.

These three years spent in the LURPA have been a pleasant time thanks to all the colleagues who have always been very helpful either for technical, scientific or personal problems. In particular, I thank Françoise for its efficiency and its kindness, Marc for its philosophical talks, Sylvain for its support, the Mexican team for the "quesadillas", Steve for its gossip, Vincent for its coding capacities.

I also would like to thank all the colleagues of Kaiserslautern, in particular Jürgen and Mohammed, for their kindness each time I came there.

Finally, I want to thank my parents and my brothers who always encourage me in the way I have chosen. I don't forget my husband, David, who has coached and supported me during all these three years, and of course my daughter, Clara, who enlightens my life every day.

*Cachan, December 2006
Gaëlle Marsal*

Contents

Contents	i
Introduction	1
1 Fieldbuses in Automation Systems	5
1.1 Networked Automation Systems	5
1.2 Time performances of Networked Automation Systems	7
1.2.1 Networked Control Systems	7
1.2.2 Classification of Networked Automation System performances	7
1.2.3 From user requirements to response time	8
1.2.4 From designer requirements to network cycle time	10
1.3 Using specific purpose fieldbuses	10
1.3.1 Network topology and OSI reference model	10
1.3.2 Fieldbuses history	12
1.4 Using general purpose communication technologies for fieldbus	15
1.4.1 Using Ethernet protocol	15
1.4.2 Using TCP and IP protocols	18
1.4.3 Using the client/server cooperation model	19
1.4.4 Impact on time performances of switched Ethernet-based Automation Systems with a client/server model	22
2 Methods for evaluation of time performances in Networked Automation Systems	29
2.1 A priori evaluation	29
2.1.1 Methods based on analytic models	30
2.1.2 Exhaustive state-space exploration of models	34
2.1.3 Partial state-space exploration of models	35
2.2 A posteriori evaluation: Experimental methods	39
2.3 Proposed method for time performance evaluation	40
3 Principles for dynamic model construction	43
3.1 Static models of Ethernet-based Automation Systems	43
3.2 Choice of the formalism for the dynamic model	45
3.2.1 Time consumption mechanisms representation	45

3.2.2	Representation of architecture structure	48
3.2.3	Physical time representation	48
3.2.4	Data representation	49
3.2.5	Formalism for dynamic modelling	49
3.3	Presentation of the chosen Petri Net class	49
3.3.1	Colour feature	49
3.3.2	Hierarchy	50
3.3.3	Time feature	51
3.3.4	Use of complex colours and functions	52
3.4	Structure of the generic model	54
3.4.1	Hierarchical structure	54
3.4.2	Colours definition	56
4	Dynamic model description	61
4.1	Generic model	61
4.1.1	Global generic model	61
4.1.2	Modelling data flows	62
4.2	Components: extracts of the generic model	62
4.2.1	Ethernet Modbus client	62
4.2.2	PC-based controller model	66
4.2.3	Event source	69
4.2.4	Switch	70
4.3	Instantiation process	71
4.3.1	Parameters	71
4.3.2	Obtaining elementary delays values	72
4.3.2.1	Notations	72
4.3.2.2	Obtaining delays by measurement	73
4.4	Extract of one particular model	74
5	Obtaining time performances from a particular model	79
5.1	Method overview	79
5.2	Set up of one particular model	81
5.2.1	Introducing partially random execution times	81
5.2.2	Event generation scheduling for response time evaluation	82
5.3	Simulation and post-treatment	83
6	Evaluation of time performances	87
6.1	Presentation of the case studies	87
6.2	Comparison of three major cooperation models	91
6.2.1	Evaluation methods of Network Cycle Time	91
6.2.2	Numerical values of Network Cycle Times for the studied architectures	95
6.2.3	Discussion on Network Cycle Times obtained	95

6.2.3.1	Comparison of the three cooperation models	95
6.2.3.2	Detailed analysis of Network Cycle Time of client/server model	96
6.2.3.3	Synthesis	96
6.3	Evaluation of response time of Ethernet-based Automation Systems .	98
6.3.1	Response time distribution	98
6.3.2	Influence of resource sharing and of synchronisation between processes	101
6.3.2.1	Influence of resource sharing	105
6.3.2.2	Influence of synchronisation between asynchronous processes	107
6.3.2.3	Synthesis	108
6.3.3	Delays caused by switches	108
Conclusion		113
Bibliography		117
A Generic model of Ethernet-Based Automation System		123
