To M.

Acknowledgements

The work on this thesis was carried out under the supervision of R. Horst, University of Trier, Germany, whom I thank for giving me the opportunity of studying at the University of Trier for two years.

I am also grateful to J.-B. Hiriart-Urruty, Université Paul Sabatier, Toulouse, France, for his readiness to act as a referee of this thesis and for giving many hints for future research.

I highly benefited from the collaboration with the members of the global optimization group in Trier: N. V. Thoai, U. Raber and M. Locatelli.

W. Oettli, University of Mannheim, Germany, gave valuable comments on Chapter 2 of this thesis.

My thank also goes to I. M. Bomze, University of Vienna, Austria, for continual encouragement and stimulating discussions.

My work would not have been possible without the financial support of the “Deutsche Forschungsgemeinschaft” during my time in the “Graduiertenkolleg Mathematische Optimierung” in Trier from April 1996 to May 1998.

The members of the “Graduiertenkolleg Mathematische Optimierung”, in particular its speaker E. Sachs, provided a pleasant atmosphere for working.

Finally, I would like to thank the members of the Department of Statistics at Vienna’s University of Economics and Business Administration, which I am affiliated with since June 1998, for their support and encouragement.

Erster Berichterstatter:

Prof. Dr. R. Horst, Universität Trier

Zweiter Berichterstatter:

Prof. Dr. J.-B. Hiriart-Urruty, Université Paul Sabatier, Toulouse

Tag der mündlichen Prüfung:

12. April 1999

Contents

I	Optimality Conditions	1
1	Introduction to Part I	3
2	Global Optimality Conditions for Minimizing Differences of Functions	5
2.1	Introducing the Problem	5
2.2	Preliminaries from Convex Analysis	6
2.3	Optimality Conditions for D.C. Problems	8
2.4	Optimality Conditions for a More General Class of Functions	10
3	Global Optimality Conditions for Convex Maximization	17
3.1	From D.C. Programming to Convex Maximization	18
3.2	Interconnection of Global Optimality Criteria	22
3.3	Further Optimality Conditions	26
3.3.1	Reformulation of (HU) in the Differentiable Case	26
3.3.2	Maximization of Strictly Convex Quadratic Functions over Convex Sets	27
3.3.3	Equivalences between Nonconvex Optimization Problems	29
4	Connections between Local and Global Optimality Conditions	31
4.1	Necessary Conditions for Local Optimality	31
4.2	The Piecewise Affine Case	34
4.3	Sufficient Conditions for Local Optimality	36
4.4	A Generalization of Strelakovsky's Optimality Condition to D.C. Problems	37

5	Remarks on D.C. Decompositions	39
5.1	Existence of D.C. Decompositions	39
5.2	D.C. Decompositions for Polynomials	40
II	Algorithmical Aspects	45
6	Introduction to Part II	47
7	The Branch-and-Bound Algorithm	49
7.1	The Basic Branch-and-Bound Scheme	49
7.2	Branching and Bounding Procedures	51
7.3	Convergence Conditions	53
8	Lagrange Duality and Partitioning Techniques	55
8.1	Convex Envelopes and Duality	55
8.1.1	Convex Envelopes	55
8.1.2	Duality Gap	57
8.2	Branch-and-Bound Methods with Dual Bounds	59
8.2.1	Limit Behaviour on Nested Sequences	59
8.2.2	Partitioning Methods with Dual Bounds	62
8.2.3	Partly Convex Optimization Problems	64
8.3	Some Applications	66
8.3.1	Linearly Constrained Problems and Convexification	66
8.3.2	Generalized Bilinear Constraints	66
8.3.3	Maximizing the Sum of Affine Ratios	67
8.3.4	Concave Minimization under Reverse Convex Constraints	68
9	Global Optimization of Sums of Ratios and the Corresponding Multiple-Criteria Decision Problem	69
9.1	Applications and Background	69

9.2	Application of the Basic Branch-and-Bound Scheme to the Sum-of-Ratios Problem	71
9.3	Convergence	75
9.4	Upper Bounds for Sums of Affine Ratios	76
9.5	Lower Bounds for Sums of Affine Ratios	80
9.5.1	The Corresponding Multiple-Objective Problem	80
9.5.2	A Generalized Parametric Approach	81
9.5.3	A Finite Procedure for Calculating Efficient Points	86
9.6	Numerical Results	88
10	Second Branch-and-Bound Approach for the Sum-of-Ratios Problem	91
10.1	Reformulating the Problem	92
10.2	The Algorithm	93
10.2.1	Upper Bounds	94
10.2.2	Computation of Feasible Points	96
10.3	Convergence	96
10.4	Numerical Results	98
	Bibliography	101
	Index	107
