Systems Theoretic Aspects of PDAEs and Applications to Electrical Circuits

Timo Reis

Vom Fachbereich Mathematik
der Universität Kaiserslautern
zur Erlangung des akademischen Grades
Doktor der Naturwissenschaften
(Doctor rerum naturalium, Dr. rer. nat.)
genehmigte Dissertation

1. Gutachter: Prof. Dr. Eva Zerz
2. Gutachter: Prof. Dr. Caren Tischendorf

Vollzug der Promotion: 2. Juni 2006

D 386

Writing a doctoral dissertation is impossible without different kinds of support from others and this page is dedicated to those who contributed to this work.
The project was initiated and financially supported by the DFG-Graduiertenkolleg "Mathematik & Praxis". The concept is that the supervision of this project is performed by a professor from university and, additionally, an industrial partner. In my case, this "academic parenthood" was taken over by Prof. Dr. Eva Zerz, formerly at the TU Kaiserslautern and now at the RWTH Aachen, and Dr.-Ing. Ralf Sommer at Infineon Technologies AG in Munich. Of course, my first and foremost gratitudes go to Eva for three years of supervision, helpful advice, sending me on many business trips and for endowing me with the freedom to approach the topic from my own point of view. I thank Ralf for introducing me into current industrial problems of electrical engineering while also being interested in theoretic and academic questions.
Further thanks go to the Technomathematics Group at the TU Kaiserslautern. Especially after the enlargement of the group in my last year, there was a vivid and friendly atmosphere also off the job. Moreover I thank Dr. Carsten Mayer and M.Sc. Petra von Eyss for their friendship and helpful suggestions about doing a doctorate at all.
I thank Prof. Dr. Volker Mehrmann and his group at the TU Berlin for the kind hospitality during my visit for a semester. Their incitations and experiences in the field of differential-algebraic equations have been a big benefit for me. Moreover I thank Prof. Dr. Birgit Jacob for helpful advice. Especially I am grateful to Prof. Dr. Caren Tischendorf for many fruitful discussions of technical details and for being a referent of this work.
Furthermore I am much obliged to my colleague and very good friend M.Sc. Martin Bodestedt for spending a lot of time for proofreading this thesis and many interesting discussions.
My parents Mathilde and Hans Reis and family Lehmann from Sevenoaks/UK are gratefully reciprocated for the encouragement and support during the last couple of years.
Exceptional thanks go to the person which is more fascinating than all infinite dimensional descriptor systems together. Although she was the most afflicted with this project, my Susi exercised a lot of patience and her support contributed in a great extent to this work.

Table of Contents

Introduction **1**

1 Preliminaries and Mathematical Foundations **5**

1.1 Notations and Functional Analytic Requisites 5

1.2 Function Spaces and Linear Time-Invariant Operators 13

1.3 Ordinary Infinite Dimensional Systems 26

1.3.1 Generators of Semigroups 26

1.3.2 Abstract Linear Systems 29

1.4 Finite Dimensional Descriptor Systems 39

2 Descriptor Systems on Hilbert Spaces **48**

2.1 Solvability of Abstract Differential-Algebraic Equations 50

2.2 Decoupling of Operator Pairs 54

2.2.1 Complete Decouplings 68

2.3 Consistent Initialization and Perturbation Index 75

2.4 Inputs and Outputs 85

2.4.1 Controllability 86

2.4.2 Observability 94

3 PDAE Input Output Systems **100**

3.1 Solvability, Decoupling and Consistent Initialization 102

3.2 Model Reduction 113

4 Time-Delay Systems **122**

4.1 Delay-Differential Equations as Infinite Dimensional Descriptor Systems 122

4.2 Model Reduction 130

5 Electrical Circuits with Transmission Lines **144**

5.1 The Circuit Model 145

5.2 Topological Index Analysis 152

5.3 Stability of Passive Circuits 168

5.4 Model Reduction 181

Summary and Outlook **195**

A Formulas for the Inversion of Operators **201**

B Further Laplace Transform Relations **204**

C LFTs and Worst-Case $\mathcal{H}_\infty$-Performance **206**

D Graph Theoretical Fundamentals **213**

E Conditions on the Controlled Sources **217**

Bibliography **219**

List of Notations **231**

Index **237**
