ACKNOWLEDGEMENTS

I would like to take this opportunity to express my gratitude to my supervisor Pavel Ripka, my colleagues Antonín Platil and Petr Kašpar for their scientific guidance, valuable comments and patience during my studies.

Secondly, I would like to thank to my colleagues Aleš Cerman, Alois Típek, Michal Malátek, Jan Včelák, Michal Vopálenský, Jiří Saneistr and Pavel Mlejnek for their friendship, encouragement and participation on a great working environment, which would be very hard to find again. It has been an honour for me to be a member of the “MagLab” team.

My thanks go also to my undergraduate students Michal Janošek, Lukáš Pavel and Tom Pöthig for their participation on my research activities leading to this thesis.

Last but not least, I would like to thank my parents Marta Kubíková and Miroslav Kubík for their support and patience although it was difficult at times. My research would not be possible without their support.

ABOUT THE AUTHOR

Jan Kubík (*1979) received his Ing. degree (M.Eng. equivalent) in the area of computer-controlled measurement systems in March 2003 at the Faculty of Electrical Engineering of Czech Technical University in Prague and the Ph.D degree in the area of fluxgate sensors under the supervision of Prof. Pavel Ripka in 2006 at the same university. He also worked at the National University of Ireland in Galway (2001 and 2002) and at the Lappeenranta University of Technology in Lappeenranta, Finland (2003). He has joined the Tyndall National Institute in Cork, Ireland in September 2006 as a researcher. He is an author or co-author of 40 research publications including patents, journal papers and conference proceedings. His research interests range from magnetic field sensors design, sensor characterisation and magnetometer electronics design to computer-controlled measurement systems development, finite element method (FEM) modelling of magnetic systems and microcontroller applications. In his spare time, he enjoys playing squash, photographing, reading and hiking.
