

# Proceedings of the IEEE Virtual Reality 2009 Workshop

## 2<sup>nd</sup> Workshop on **Software Engineering and Architectures for Realtime Interactive Systems** (SEARIS@VR2009)

March 14, 2009

Lafayette, Louisiana, USA

### **Workshop Chairs**

Marc Erich Latoschik (*Universität Bayreuth, Germany*)

Dirk Reiners (*University of Louisiana, Lafayette, USA*)

Roland Blach (*CC Virtual Environments Fraunhofer IAIO Stuttgart, Germany*)

Pablo Figueroa (*Universidad de los Andes Bogota, Colombia*)

Raimund Dachselt (*Otto-von-Guericke-Universität Magdeburg, Germany*)

**Marc Erich Latoschik, Dirk Reiners, Roland Blach,  
Pablo Figueroa, Raimund Dachsel (Eds.)**

## **Message from the SEARIS Workshop Chairs**

Several approaches have been developed and utilized in the field of Realtime Interactive Systems (RIS) in the past two decades. Virtual, Augmented, Virtualized, in general Mixed Realities, as well as real-time simulations and computer games led to manifold inspiring solutions for RIS developments in research and production. However, it is an ongoing challenge to identify and separate both novel results and well known solutions in any new system. The goal of this workshop is to analyze and structure the current state of the art in RIS software engineering and architectures. We want to identify common as well as novel paradigms, concepts, methods, and techniques that support technical developments required in this field. A unified presentation of systems will allow us to support research and development in a more efficient way, and will provide a valuable source of information for future developments. This workshop is our first integrated attempt to address the complex issue of RIS development and to summarize the work our community is doing.

SEARIS provides a forum for researchers and practitioners working on the design, development, and support of Realtime Interactive Systems which span from VR, AR, and MR environments to novel Human-Computer-Interaction systems and entertainment applications. After a successful initial SEARIS workshop in 2008, this first follow-up proceeds to establish a sustainable community shaping a common understanding, deriving common paradigms, developing useful and necessary methods and techniques, and fostering new ideas. This year's workshop at IEEE VR 2009 has built on our previous experiences at SEARIS 2008 and fostered an interactive, discussion-like exchange format as opposed to rather traditional paper presentations.

We have been delighted to be again part of the program of IEEE VR 2009 in Lafayette, Louisiana. The proceedings contain 11 accepted contributions, which add on to the ideas and discussions the community has collected during the first SEARIS Workshop in 2008 and are also available online at <http://www.searis.net/>.

Various hot topics have been identified from the current scientific discussion and have been presented and discussed in different panels. The contributions could be grouped according to several aspects. In fact, it is one of the workshop's goals to identify such key aspects and many authors are shedding light onto several key issues.

We grouped the papers into 4 main sections:

- Specific System Architectures
- Modeling and Abstraction
- Subsystems of RIS
- Methodology and Patterns

The target audience for the SEARIS workshop series and its publications are researchers and developers from VR/AR as well as from technically close fields like ambient/pervasive computing and - of course - the computer games community.

We would like to thank all people who made this workshop a reality. First, to the workshop chairs at IEEE VR for their support and willingness to accept our proposal. Next, to all people who submitted papers to this track, either accepted or not. They are the heart and soul of this workshop and the starting point to the discussion we would like to foster. Finally, to the attendees of the workshop, for their active interest in this proposal.

Marc Erich Latoschik (Universität Bayreuth, Germany)

Dirk Reiners (University of Louisiana, Lafayette, USA)

Roland Blach (CC Virtual Environments Fraunhofer IA0 Stuttgart, Germany)

Pablo Figueroa (Universidad de los Andes Bogota, Colombia)

Raimund Dachselt (Otto-von-Guericke-Universität Magdeburg, Germany)

# Table of Contents

## Session 1: Specific System Architectures

SUED: An Extensible Framework for the Development of Low-cost DVE Systems .....	3
<i>Sergio Casas, Pedro Morillo, Jesús Gimeno, Marcos Fernández</i>	
A Framework for Networked Interactive Surfaces .....	9
<i>Tom Cuypers, Karel Frederix, Chris Raymaekers, Philippe Bekaert</i>	
Coupling Virtual Reality Open Source Software Using Message Oriented Middleware ...	17
<i>Fábio Rodrigues, Rodrigo Ferraz, Márcio Cabral, Fernando Teubl, Olavo Belloc, Marcia Kondo, Marcelo Zuffo, Roseli Lopes</i>	

## Session 2: Modeling and Abstraction

VR for Everybody: The SNaP Framework .....	25
<i>Michelle Annett, Walter Bischof</i>	
Centralized Spatial Data Structures for Interactive Environments .....	31
<i>Joachim Günther, Florian Mannuß, André Hinkenjann</i>	

## Session 3: Subsystems of RIS

Intuitive Interaction with VR Applications Using Video-based Gesture Recognition .....	37
<i>Cornelius Malerczyk, Timo Engelke</i>	
Simplifying the Integration of Virtual Humans into Dialog-like VR Systems .....	41
<i>Yvonne Jung, Johannes Behr</i>	
A Prototyping Architecture for Augmented Reality .....	51
<i>Mario Becker, Harald Wuest, Folker Wientapper, Timo Engelke</i>	

## Session 4: Methodology and Patterns

3DUI Flavors beyond Vanilla .....	57
<i>Chadwick Wingrave</i>	
Design Patterns in Componentized Scenegraphs .....	61
<i>Nicholas Polys, Shyam Visamsetty, Eli Tilevich</i>	
The Value of Patterns in Deep Media Scenegraphs .....	67
<i>Nicholas Polys, Shyam Visamsetty, Puranjoy Bhattacharjee, Eli Tilevich</i>
