Acknowledgements

This thesis would not have been written without relevant and conscientious advice, sound guidance, constant support and help of many people, whom I would like to thank here.

First of all, I am greatly indebted to Prof. Dieter Gerling for supporting and supervising my dissertation. His valuable suggestions, comments and advice shaped my understanding of subject matters and awakened my interest for the themes I explored. I am also very thankful to Prof. Ekkehard Bolte, who reviewed this work, for his valuable feedback. I would like to thank Prof. Berthold Lankl for participating in my examining committee.

Many thanks also go to all my colleagues at the Institute of Electrical Drives and Actuators for the encouragement and help they have provided. In particular, I am very grateful to Dr.-Ing. Hans-Joachim Köbler for his continuous support and friendship. I would also like to express my appreciation to Dr.-Ing. Harald Hofmann for his help with all sort of problems related to my computer.

My mother and father deserve especially sincere thanks for their continuous love, encouragement and patience. Most of all, I would like to thank my wife Agnieszka for her endless love and support. Without her, this dissertation would never have been completed.

Marcin Pyc

1. INTRODUCTION	7
1.1. MORE ELECTRICAL AIRCRAFT.....	7
1.2. DISSERTATION CONTENT	9
2. PROJECT AIMS	10
2.1. CURRENTLY USED GENERATORS	10
2.2. MEA SPECIFICATION.....	10
3. COMPARISON OF ELECTRICAL DRIVES SUITABLE FOR THE MEA PROJECT	12
3.1. PM MACHINE.....	12
3.2. INDUCTION MACHINE.....	17
3.3. SWITCHED RELUCTANCE MACHINE.....	19
3.4. HOMOPOLAR MACHINE	21
3.5. HETEROPOLAR MACHINE	24
3.6. COMPARISON OF THE MACHINES	26
3.7. COMPARISON CONCLUSIONS	34
4. NUMERICAL CALCULATION	37
4.1. FEM SOFTWARE.....	37
