A novel regulator for distribution network planning and operation

Ein neuartiger Regler für die Planung und den Betrieb von Verteilnetzen

vom

Fachbereich Elektrotechnik und Informationstechnik
der Technischen Universität Kaiserslautern
zur Verleihung des akademischen Grades
Doktor der Ingenieurwissenschaften (Dr. -Ing.)
genehmigte Dissertation

von

M. Sc. Haiyan Ma
geb. in Hebei, China

Tag der mündlichen Prüfung: 18. Mai 2022

Dekan des Fachbereichs: Prof. Dr. rer. nat. Marco Rahm

Prüfungskommission

Vorsitzende:

Prof. Dr. habil. Ping Zhang

Foreword

This thesis has been written at the chair for Energy Systems and Energy Management (ESEM) at the Technical University of Kaiserslautern (TUK). I have received countless supports from many people, to whom I would like to thank.

First of all, my sincerely thanks to Professor Dr.-Ing. Wolfram Wellssow, my PhD supervisor, for giving me the chance to start my PhD at the research institute under his supervision. As the German word 'Doktorvater', Prof. Wellssow is like my academic father in many ways. Strict but reasonable, I have learned so many things under his supervision and grew day-by-day. I want to thank him for his massive support, patience and the precious experiences, that not only make me understand knowledge itself but also let me aware of its heritage. I would also like to extend my thanks to Professor Dr.-Ing. Stefan Götz also from the TUK, my second supervisor, for his kind willingness to evaluate this work.

During my working time at ESEM, I had the opportunities to work in different projects and with many nice people. I was enrolled by the 'FLOW-R' project which follows the 'FLOWKONtrol' project. I want to thank my teammates, Stefan Lang and Marco Weisenstein, for their help in many aspects of the projects. I will be unable to fulfill many things without them. I am also grateful to meet the bunch of people here, where good memories are kept in my head: the nice office sharing time with Han Rui, Robert Brandalik and Razieh Balouchi, the enjoyable lunches with Anes Benzarti, Davood Raoofsheibani, Marian Zugck, and the fitness time with Stephan Röhrenbeck and Martin Ostermann and so on. Just too many nice people and good moments that I will always remember. Of course, I would like to thank Dagmar Häßel, for her warm-hearted help. Moreover, I would like to thank my students who supported me by writing their theses under my supervision, Jie Wang, Maximilian Hamilius, etc., and some of them become good friends to me.

Last but not least, my gratitude to my family and friends. I want to thank my parents and family, for their support ever since I was a kid. Besides, I am appreciated of the help from my friends, Mengyu Chu, Yue Zhou, Jingyu Chen, etc., for all the considerate talks and the thoughtful deeds, which always cheer me up when I am down. They have special meanings to me, and are somehow already 'family members'.

Contents

1	Introduction	1
1.1	Situations and challenges of low voltage networks	1
1.2	Structure of the dissertation	4
2	Fundamentals of LV networks	5
2.1	Introduction	5
2.2	Topologies of LV networks	5
2.3	Equipment of LV networks	8
2.3.1	Transformers	8
2.3.2	Underground & Overhead systems	9
2.3.3	Loads	10
2.3.4	PVs	12
2.3.5	Protection devices in LV networks	15
2.3.6	Measurement devices	16
2.4	Limits of LV networks	17
2.4.1	Voltage quality	17
2.4.2	Thermal limit	18
2.5	Voltage distribution considering RESs	19
2.6	Network optimization	20
3	Network coupling benefits and devices	25
3.1	Benefits of network coupling	25
3.2	Introduction of novel power flow controller	27
3.2.1	Introduction of meshed impedance	27
3.2.2	Control with novel power flow controller	29
3.2.3	Design of novel power flow controller	31
4	Control concepts for Novel Power Flow Controller	39
4.1	Introduction of control concepts	39
4.2	Estimation method	40
4.2.1	Node voltage method	40
4.2.2	Characteristic curve method	43
4.2.3	Comparison of estimation methods	46

4.3	Evaluation process	47
4.3.1	Introduction of evaluation process	47
4.3.2	Set-value control	48
4.3.3	Limit control for one measurement point	48
4.3.4	Limit control for multiple measurement points without conflicts	49
4.3.5	Limit control for multiple measurement points with conflicts	50
4.4	Parametrization for control concepts	52
5	Application of Novel Power Flow Controller	55
5.1	Measurement points selection	55
5.2	Placement strategy of controller	57
5.2.1	Criteria for placement selection	57
5.2.2	Evaluation approaches for networks without coupling	59
5.2.3	Evaluation approaches for coupled networks	61
5.3	Topology identification	63
5.3.1	Introduction	63
5.3.2	Approach description	64
5.4	Fallback solution for communication loss	68
5.4.1	Fallback solution based on ANN	68
5.4.2	Conventional fallback solution	72
6	Simulation and analysis	75
6.1	Basics for simulations	75
6.1.1	Simulation settings	75
6.1.2	Use-cases	77
6.2	Selection of measurement points	81
6.3	Positioning concept	82
6.3.1	Introduction of positioning tests	82
6.3.2	Network without coupling	82
6.3.3	Coupling networks	85
6.3.4	Conclusions of placement strategy	87
6.4	Verification of control concept	88
6.4.1	Measurement points for control concept	88
6.4.2	Verification of estimation process	89
6.4.3	Verification of evaluation process	94
6.4.4	Evaluation of control concepts	103
6.5	Topology identification	104
6.5.1	Introduction of verification processes	104
6.5.2	Verification of NVM-based approach	106
6.5.3	Verification of meshed-impedance-based approach	109
6.5.4	Control with topology identification	113

6.5.5	Discussion of topology identification	115
6.6	Validation of fallback control	116
6.6.1	Basics for fallback control	116
6.6.2	Verification of NVM-based ANN	118
6.6.3	Verification of CCM-based ANN	123
6.6.4	Discussion of the fallback	125
6.7	Conclusion of simulations	125
7	Verification of laboratory and field tests	127
7.1	Fundamentals for tests	127
7.1.1	The NPFC prototype	127
7.1.2	The revised characteristic curve method	129
7.2	Laboratory tests	133
7.2.1	Introduction of lab tests	133
7.2.2	Lab set-ups	134
7.2.3	Setups for profiles and topologies	135
7.2.4	Verification of the control concepts in lab tests	137
7.2.5	Special tests and criteria	144
7.2.6	Discussion of the lab test results	146
7.3	Field tests	147
7.3.1	Basics for field test	147
7.3.2	Verification of control concepts in field tests	147
7.3.3	Conclusions of the field tests	152
8	Assessment of network coupling approaches	153
8.1	Introduction of assessment aspects	153
8.2	Economic assessment	154
8.2.1	Fundamentals of economic analysis	154
8.2.2	Measures for network critical conditions	155
8.2.3	Economic analysis of different measures	159
8.3	Technical assessment	161
8.3.1	Assessment for UCs	161
8.3.2	Assessment for PV increase	165
8.4	Conclusion of technical-economic assessment	166
8.5	Market expectation	168
9	Summary	171
Acronyms	175
Glossary	179

A Appendix	181
A.1 Development of load and PV scenarios	181
A.1.1 Basics	181
A.1.2 Summary of use cases	182
A.2 MPs selection	185
A.3 Network coupling	186
A.4 Control concept	187
A.4.1 Verification of estimation	187
A.4.2 Verification of evaluation	196
A.4.3 Topology identification	201
A.5 Lab test	203
A.5.1 Information of devices	203
A.5.2 Profiles for load/PV/extra controller	204
A.6 Assessment of network coupling approaches	209
A.6.1 Cost of different approaches	209
A.7 Technical assessment	211
A.7.1 Assessment for UCs	211
List of Figures	213
List of Tables	219
