# Preface

Firstly, I would like to thank, infinitely often, my wife Monika for her wonderful, heartfelt support throughout the creation of this book; and for her understanding for all those late night working sessions. Without her, life would only be a null set (with respect to my subjective probability, of course).

Furthermore, I am grateful to the Faculty of Mathematics and Economics at the University of Ulm and to the Faculty of Mathematics at the University of Karlsruhe, for constantly creating a warm atmosphere which – as for a plant – has been a perfect environment to let this work grow fruitfully. In fact, the sowing and a high percentage part of the development of the body (root system, stem, branches, twigs, buds) took place at the Department of Finance in Ulm; later on, the blossoms and fruits have thrived at the Department of Mathematical Stochastics in Karlsruhe.

Especially, I am indebted to Volker Schmidt and to Elias S.W. Shiu. Both have given valuable suggestions and comments. Many thanks also to Uwe Jensen, Günter Last and Alfred Müller for valuable remarks, as well as to Nobert Henze for his very stimulating constant interest.

Moreover, I would also like to thank Andreas Borchert for his selfless and very fast help, whenever specific hard- or software problems with my workstation occurred.

Let me finally mention, that this work has been typed with  $\text{\LaTeX}2\text{e}$ ; many thanks to all those people who have created and constantly updated this very nice software.

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Overview . . . . .	1
1.2	Comments on the Style . . . . .	3
<b>A</b>	<b>General Markov Processes</b>	<b>5</b>
<b>2</b>	<b>Exponentials of Additive Functionals</b>	<b>7</b>
2.1	Motivation; Khas'minskii-Lemma . . . . .	7
2.2	The Set-Up . . . . .	9
2.2.1	Process . . . . .	9
2.2.2	Additive Functional . . . . .	10
2.2.3	Random Time . . . . .	11
2.2.4	Stieltjes Exponential . . . . .	11
2.2.5	Compensated Powers . . . . .	12
2.3	Stieltjes Exponentials $\mathcal{E}\mathcal{X}\mathcal{P}$ . . . . .	12
2.3.1	Right-Continuous, Inhomogeneous Case . . . . .	12
2.3.2	Right-Continuous, Homogeneous Case . . . . .	19
2.4	Ordinary Exponentials $\exp$ . . . . .	23
2.4.1	Right-Continuous Case . . . . .	23
2.4.2	Continuous Case . . . . .	29

2.4.3	Absolutely Continuous Case . . . . .	32
<b>B</b>	<b>Diffusion Processes – Existence</b>	<b>37</b>
<b>3</b>	<b>Uniform Novikov Conditions</b>	<b>39</b>
3.1	Stochastic Differential Equations . . . . .	39
3.2	Multi-Dimensional Models with Unit Diffusion Matrix . . . . .	44
3.2.1	Canonical Brownian Motion . . . . .	44
3.2.2	Uniform Novikov Condition; Sufficient Stochastic Conditions . . . . .	45
3.2.3	Sufficient Non–Stochastic Conditions . . . . .	49
3.2.4	Examples . . . . .	51
3.2.5	Equivalent Conditions . . . . .	54
3.2.6	Remarks on the Factor $1/2$ . . . . .	58
3.2.7	Comparison with other Exponential Moments . . . . .	61
3.3	Some Financial Price Models . . . . .	64
3.3.1	The Drift-Less SDE . . . . .	65
3.3.2	A Sufficient Stochastic Condition . . . . .	66
3.3.3	Equivalent Conditions . . . . .	68
3.3.4	Sufficient Non-Stochastic Conditions . . . . .	76
3.3.5	Examples . . . . .	79
<b>C</b>	<b>Diffusion Processes – Properties &amp; Applications</b>	<b>83</b>
<b>4</b>	<b>Relative Entropy &amp; <math>\mathcal{J}_\alpha</math>–Divergences</b>	<b>87</b>
4.1	Background . . . . .	87
4.2	The Case with Unit Diffusion Matrix . . . . .	90
4.2.1	General $\mathcal{J}_\alpha$ –Divergence Properties . . . . .	90
4.2.2	Stronger Results . . . . .	100

4.2.3	Handier Assumptions; Examples . . . . .	105
4.3	The Generalized Samuelson-Merton-Black-Scholes Model . . . . .	107
4.3.1	Behaviour for the Full Parameter Range . . . . .	107
4.3.2	Examples . . . . .	118
<b>5</b>	<b>Some Statistical Information Measures</b>	<b>121</b>
5.1	Underlying Basic Decision and Information Theory . . . . .	121
5.2	The Case with Unit Diffusion Matrix . . . . .	127
5.2.1	Weighted-Average and Non-Average Information, under Novikov Type Assumptions . . . . .	127
5.2.2	The More Special Context . . . . .	135
5.2.3	Tools for Concrete Situations; Examples . . . . .	139
5.3	The Generalized Samuelson-Merton-Black-Scholes Model . . . . .	141
5.3.1	General Information Results . . . . .	142
5.3.2	Information under Stronger Requirements . . . . .	148
5.3.3	Non-Stochastic Assumptions and Examples . . . . .	149
<b>6</b>	<b>Some Exponential Properties of Diffusion Processes</b>	<b>151</b>
6.1	The Case with Unit Diffusion Matrix . . . . .	151
6.1.1	Uniform Novikov Property . . . . .	152
6.1.2	Kinetic Energy; Examples . . . . .	154
6.2	The Generalized Samuelson-Merton-Black-Scholes Model . . . . .	156
6.2.1	Exponential Properties under Stochastic Assumptions . . . . .	157
6.2.2	The Comfortably-Verifiable Context . . . . .	160

<b>7 Arbitrage and Contingent Claim Pricing</b>	<b>163</b>
7.1 Motivation; Basic Notions from Finance . . . . .	163
7.2 The Case with Unit Diffusion Matrix . . . . .	169
7.2.1 Girsanov property, Equivalent Martingale Measure, No Arbitrage . . . . .	170
7.2.2 Modelling-Measure-Free Assumptions . . . . .	174
7.3 The Generalized Samuelson-Merton-Black-Scholes Model . . . . .	177
7.3.1 Transformed World . . . . .	177
7.3.2 Equivalent Martingale Measures in the Discounted World	183
7.3.3 Discounted Gains Process; Tame Strategies; Arbitrage . .	186
7.3.4 Valuation of Contingent Claims and Options . . . . .	191
7.3.5 Examples . . . . .	197
 <b>List of Principal Notation</b>	 <b>199</b>
 <b>Bibliography</b>	 <b>207</b>
 <b>Index</b>	 <b>220</b>
