

Experimental Study of the Optical and Structural Properties of Carbon Nanoparticles

Dissertation

zur Erlangung des akademischen Grades
doctor rerum naturalium (Dr. rer. nat.)

vorgelegt dem Rat der Physikalischen-Astronomischen Fakultät
der Friedrich-Schiller-Universität Jena

von Dipl.-Phys. Isabel Llamas Jansa
geboren am 14.11.1973 in Tarragona, Spanien

Gutachter

- 1.- Prof. Thomas Henning, Max-Planck-Institut für Astronomie, Heidelberg, Germany
- 2.- Prof. Walter W. Duley, University of Waterloo, Waterloo, Ontario, Canada
- 3.- Prof. Luigi Colangeli, Osservatorio Astronomico di Capodimonte, Napoli, Italy

Tag der letzten Rigorosumsprüfung: 27.01.2006

Tag der öffentlichen Verteidigung: 02.02.2006

Berichte aus der Astronomie

Contents

Introduction	1
1 Carbon grains in astrophysical environments	3
1.1 The interstellar extinction features	3
1.2 Post-AGB circumstellar environments	5
1.3 Experimental and analytical approaches	7
2 Theoretical background and simulations	9
2.1 Properties of hydrogenated amorphous carbon	9
2.1.1 Hybridization and bonding in carbonaceous solids	9
2.1.2 The short- and medium-range structure of HAC	10
2.1.3 Electronic properties of HAC	12
2.1.4 Optical constants and HAC	15
2.2 Particles, particle aggregates and films	16
2.2.1 Optical properties from transmission measurements	17
2.2.2 Spherical particles	18
2.2.3 Particle aggregates and films	20
2.2.4 Tauc relation for compact films	21
2.3 Simulation of particles, aggregates and thin films	21
2.3.1 Simulation in the Rayleigh limit	22
2.3.2 Simulation of spherical particles and particle aggregates	24
2.3.3 Energy gap for HAC materials	26
3 Experimental Methods	27

3.1	Production methods	28
3.1.1	Infrared laser pyrolysis (IRLP)	28
3.1.2	Combustion aerosol standard (CAST) generator	31
3.2	Deposition and treatment	34
3.2.1	Molecular beam extraction technique	34
3.2.2	Impactor deposition technique	36
3.2.3	Thermal annealing technique	36
3.3	Characterization techniques	37
3.3.1	Different sample forms	37
3.3.2	Spectroscopy techniques	38
3.3.3	Transmission electron microscopy (TEM)	42
4	Experimental results	44
4.1	Infrared laser pyrolysis products	44
4.1.1	Experimental parameters involved in the production of the samples	44
4.1.2	Fourier transform infrared spectroscopy analysis	46
4.1.3	Transmission electron microscopy analysis	49
4.1.4	Spectroscopy from the FUV to the NIR range	55
4.1.5	Scattering contribution	57
4.1.6	Parametrization of the spectra: Deconvolution into Gaussians and gap energy	59
4.1.7	Some remarks about the cw-laser pyrolysis products	67
4.1.8	Summary of the main experimental IRLP results	69
4.2	Combustion aerosol standard generator products	70
4.2.1	Experimental parameters involved in the production of the samples	70
4.2.2	Fourier transform infrared spectroscopy analysis	71
4.2.3	Transmission electron microscopy analysis	72
4.2.4	Spectroscopy from the FUV to the NIR range	73
4.2.5	Scattering contribution	75
4.2.6	Parametrization of the spectra: Deconvolution into Gaussians and band gap	77
4.2.7	Summary of the main experimental CAST results	79

4.3	Thermal annealing results	80
4.3.1	Thermal annealing IRLP results	80
4.3.2	Thermal annealing CAST results	84
4.3.3	Summary of the thermal annealing results	89
5	Comparison with astronomical features	90
5.1	The interstellar extinction features	90
5.2	The circumstellar extinction and emission features	93
5.2.1	The Red Rectangle (HD 44179)	93
5.2.2	The post-AGB star HR 4049	94
5.2.3	The IR spectra of proto-planetary nebulae	96
	Summary and conclusions	98
	Bibliography	101
