## **Preface**

This work has been prepared during my stay as DAAD-Scholar with the Communications Systems Department, Electrical Engineering, FernUniversität-Gesamthochschule in Hagen.

I am very grateful to Prof. Dr.-Ing. Firoz Kaderali for the supervision of this work and for the precious discussions and suggestions. I am also specially indebted to Prof. Dr. Dr. Wolfgang A. Halang for his interest in my work and for having acted as second referee.

Further, I'd like to acknowledge Prof. Dr. rer. nat. Werner Poguntke and all the colleagues of the Communications Systems department for their various help and support.

I am indebted to my parents and all the members of my big family, and to all the numerous friends in Africa, in America and in Europe for all they have done for me.

Finally, I am especially very indebted to the DAAD (Deutscher Akademischer Austausch-Dienst) not only for the financial support during the years of preparation of my dissertation in Germany, but also for covering the print costs of this work.

|                                                                                                                            |           |
|----------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>Introduction .....</b>                                                                                                  | <b>1</b>  |
| <b>1. Vulnerability of Telecommunications Networks: an Analysis .....</b>                                                  | <b>3</b>  |
| 1.1. Introduction .....                                                                                                    | 3         |
| 1.2. Failure Sources in Telecommunications Networks .....                                                                  | 4         |
| 1.3. Societal Impact of Network Outages .....                                                                              | 8         |
| 1.3.1. Quantification of Outage Societal Impact .....                                                                      | 8         |
| 1.3.2. Outage Impact on Network Availability .....                                                                         | 13        |
| 1.4. Network Integrity Planning .....                                                                                      | 14        |
| 1.4.1. Outage / Failure Prevention .....                                                                                   | 15        |
| 1.4.2. Robust Network Design .....                                                                                         | 15        |
| 1.4.3. Manual Restoration / Disaster Recovery Planning .....                                                               | 17        |
| 1.5. Survivability Management .....                                                                                        | 18        |
| 1.6. Concluding Remarks .....                                                                                              | 21        |
| <b>2. Capacity-Related Reliability of Telecommunications Networks: A contribution to the Theoretical Foundations .....</b> | <b>23</b> |
| 2.1. Introduction .....                                                                                                    | 23        |
| 2.2. Definitions .....                                                                                                     | 25        |
| 2.3. Assumptions .....                                                                                                     | 31        |
| 2.4. General Methodology .....                                                                                             | 32        |
| 2.4.1. General Algorithm for Reliability Evaluation .....                                                                  | 34        |
| 2.4.2. General Procedure for Throughput Calculation .....                                                                  | 36        |
| 2.4.3. Maximum Flow Calculation for 2-CRR(s-t) .....                                                                       | 37        |
| 2.4.4. Throughput Calculation for A-CRR & 2-CRR(SX) .....                                                                  | 42        |
| 2.5. Definition of Survivability Functions and Reliability Polynomials .....                                               | 52        |
| 2.5.1. Reliability Polynomials .....                                                                                       | 52        |
| 2.5.2. Survivability Functions .....                                                                                       | 52        |
| 2.6. Consideration of Multiple-State Links in CRR Evaluation .....                                                         | 52        |
| 2.7. Other Special Cases .....                                                                                             | 55        |
| 2.7.1. Consideration of imperfect Nodes .....                                                                              | 55        |
| 2.7.2. General Case of dependent Link Failures .....                                                                       | 59        |
| 2.7.3. Case of Multiple-Layer Networks .....                                                                               | 60        |
| 2.8. Numerical Examples .....                                                                                              | 61        |
| 2.8.1. Example 1: Two-terminal Capacity-Related Reliability without Resource Sharing, 2-CRR(s-t) .....                     | 61        |
| 2.8.2. Example 2: All-terminal Capacity-Related Reliability with Resource Sharing, A-CRR .....                             | 66        |
