

Measurement of the Momentum Spectrum of Cosmic Ray Muons at a Depth of 320 mwe

DISSERTATION
zur Erlangung des akademischen Grades eines
Doktors der Naturwissenschaften

vorgelegt von
M.Sc. Nadir Omar Hashim
aus Mombasa-Kenia

genehmigt vom Fachbereich Physik
der Universität Siegen

Siegen Juni 2007

Gutachter der Dissertation: Prof. Dr. Claus Grupen
Siegen University, Siegen

Prof. Dr. Michael Schmeling
Max-Planck-Institute for Nuclear Physics
Heidelberg

Tag der mündlichen Prüfung: 22.06.2007

Gedruckt mit Unterstützung des Deutschen Akademischen Austauschdienstes

Master of the Muons

μ

To my family

Abstract

Cosmic ray muons are produced through interactions of primary cosmic radiation in the atmosphere. They are a component of extensive air showers which can also be measured underground. The CosmoALEPH experiment used the ALEPH detector at the European Centre for Particle Physics, CERN, to measure cosmic ray muon events at a depth of 320 mwe underground. Measurements of the momentum spectrum and charge ratio of the cosmic ray muons are presented in this work. The results are compared with the expectations from MC simulations based on different hadronic interaction models.

Contents

1	Introduction	1
1.1	Cosmic Radiation	1
1.2	Cosmic ray Muons in ALEPH	3
2	Cosmic Ray Particles	6
2.1	Primary and Secondary Cosmic Radiation	6
2.2	The Cosmic Ray Energy Spectrum	7
2.3	Cosmic Ray Muons in the Atmosphere	12
2.3.1	The Flux of Cosmic Ray Muons	13
2.3.2	The Charge Ratio of Cosmic Ray Muons	16
2.4	Cosmic Ray Muons Underground	18
2.5	EAS Simulation	21
3	The CosmoALEPH Experiment	25
3.1	The ALEPH Apparatus at LEP	25
3.1.1	The Hadron Calorimeter	28
3.1.2	The Time Projection Chamber	28
4	Simulations and Measurements	31
4.1	Air Shower Simulations	31
4.2	Detector Simulations	35
4.3	Performance of the ALEPH TPC	38
4.3.1	Effective Area	38
4.3.2	Track Fitting	41
4.3.3	Momentum Measurement	43
4.3.4	Measurement Uncertainties	44

4.3.5	Track Reconstruction Efficiency	47
4.4	Trigger Efficiency of the HCAL	50
5	Unfolding Experimental Data	56
5.1	Formulation of the Unfolding Problem	56
5.2	Techniques to Unfold Data	57
5.2.1	Correction Factors	57
5.2.2	Regularisation	58
5.2.3	Reduced Cross Entropy	58
5.2.4	Bayesian Unfolding	59
5.3	Test of the Algorithms to Unfold Data	60
6	Momentum Spectrum and Charge Ratio	64
6.1	Calculation of the Muon Flux	64
6.2	Evaluation of the Uncertainties	67
6.3	The Momentum Spectrum	71
6.4	The Charge Ratio	75
6.5	Comparisons with MC Simulations	77
7	Conclusions and Outlook	83
