Preamble

The presented thesis and its base were reached and written during my time as a research assistant at the department of ferrous metallurgy (IEHK) at the RWTH Aachen University. My thanks go to Univ.-Prof. Dr.-Ing. Wolfgang Bleck for his interest in my work and his guidance during my time at the IEHK and the fact that he gave me the scientific freedom to conduct this thesis.

I would like to thank Prof. John Speer PhD. for being my advisor and for his guidance, fruitful discussion and comments during my work.

Also, I thank Prof. Dr. rer. nat. Winfried Dahl for his guidance, helpful comments and discussions during the last stage of my work.

For his help with the electron backscattered diffraction investigations and his interest in my work I thank Dr. rer. nat. Schwedt, Alexander and in this content I would also like to thank Prof. Bevis Hutchinson for his interest and helpful comments concerning the interpretation of EBSD data.

Furthermore, I would like to thank my student workers, Ingo Bresgen, Thomas Seibel, Stefan Pinzel, Paul Wulf for the help during and Evelyn Cryns for her patience with my English and the necessary corrections.

I thank all colleges of the IEHK for the positive working atmosphere. In this context special thanks go to all members of my group Material Processing, my office mates Dipl.-Ing. Cristoph Keul and Dr.-Ing. Wolfgang Püttgen, Dr.-Ing. Götz Heßling, Dr.-Ing. Anke Moll and Klaus Herrmann.

I would like to thank my friends Dr.-Ing. Friedrich Luther and Dr.-Ing. Alexander Grosse for their companionship and support during our time in Aachen and the tangential Friday's discussions.

My deepest gratitude goes to my family and on the one hand especially to my parents for their support and the fact that they provide me the opportunity to study, and on the other hand to my girl friend Sandra Schudoma for her patience and her enduring support no matter what, even during the long working days and nights and the missing holidays.

Table of contents

1	Introduction and motivation	5
2	State of the art	7
2.1	Phase transformations.....	7
2.1.1	Influence of the alloying elements.....	8
2.1.1.1	The role of carbon	9
2.1.1.2	The role of silicon	9
2.1.1.3	The role of manganese.....	10
2.1.1.4	The role of molybdenum.....	10
2.1.2	Bainitic phase transformation.....	12
2.1.2.1	Diffusion-controlled growth of bainite	13
2.1.2.2	Displacive growth of bainite.....	14
2.1.2.3	Bainite start temperature (T_{BS})	16
2.1.2.4	The effect of carbon on the bainitic phase transformation	17
2.2	Modeling of the bainitic phase transformation	19
2.2.1	Displacive Approaches	20
2.2.1.1	Nucleation criteria.....	21
2.2.1.2	Nucleation rate	22
2.2.1.3	Autocatalysis	25
2.2.1.4	Effect of the austenite grain size	25
2.2.1.5	Final expressions	26
2.2.2	Diffusion-controlled approach	30
2.2.2.1	Nucleation	32
2.2.2.2	Growth kinetics.....	33
2.2.2.3	Diffusivity of carbon	35
2.2.2.4	Final expressions	35
2.2.3	Summary and comments on most recent existing models.....	38
2.3	Microstructure and bainitic morphologies	40
2.4	Phase analysis and image analysis methods	50
2.4.1	Imaging methods	50
2.4.2	Comment on image analyzing methods.....	52
2.4.3	Advanced image analysis routines.....	53
2.4.4	New object based analysis approach.....	54
2.5	Orientation relation in cubic crystals	57
2.6	Summary of the objectives and solution approaches	61
3	Experimental procedure	63
3.1	Material.....	63

3.2	Sample production.....	65
3.3	Dilatometry	66
3.3.1	Heat treatment and analyzing procedure for the TTT-diagrams.....	67
3.3.2	Heat treatment procedure and input data for the model approaches	68
3.4	Metallography	71
3.4.1	Light optical microscopy (LOM).....	71
3.4.2	Scanning electron microscopy (SEM)	72
3.5	Microstructural analysis	72
3.5.1	Electron backscattered diffraction EBSD	73
3.5.2	Object-oriented image analysis.....	73
3.5.2.1	Object-based image analysis of LOM images	75
3.5.2.2	Object-based image analysis of SEM images	76
3.5.2.3	Object-based image analysis of EBSD data	77
4	Results	79
4.1	Bainite morphologies	79
4.1.1	Qualitative analysis	79
4.1.1.1	Comparison SEM and LOM.....	80
4.1.1.2	Morphologies formed in steel grade 25MnV	85
4.1.1.3	Morphologies formed in the steel grade 25MnMoV	89
4.1.1.4	Morphologies formed in steel grade V1	94
4.1.1.5	Morphologies formed in the steel grade V2	98
4.1.1.6	Observations on the growth of bainitic ferrite	102
4.1.2	EBSD-measurements	105
4.1.2.1	Quantitative microstructure analysis.....	105
4.1.2.2	Orientation relationships.....	114
4.1.3	Quantitative analysis.....	123
4.2	Phase transformation	126
4.2.1	Determined TTT-diagrams.....	126
4.2.2	Dilatometric investigation of the bainitic phase transformation.....	134
4.2.3	Model approach on the bainitic phase transformation.....	140
4.2.3.1	Determination of the physical data	141
4.2.3.2	Results of the model approaches	147
4.3	Mechanical properties	154
4.3.1	Tensile testing.....	154
4.3.2	Charpy impact testing	161
5	Discussion.....	167

5.1	Phase identification and transformation.....	167
5.2	Model approaches	179
5.3	Strengthening and fracture behavior	183
6	Conclusions	191
7	Future work	193
8	Zusammenfassung.....	195
9	References.....	199
10	Appendix	207
10.1	Influence of the alloying elements on the mechanical properties	207
10.2	Homogeneity of the element distribution in the used material	208
10.3	Determination of dilatation and error evaluation	209
10.4	TEM investigations	215
