

Passenger Railway Crew Scheduling

-

Models, Methods, and Applications

Inauguraldissertation
zur Erlangung des Doktorgrades
der Wirtschafts- und Sozialwissenschaftlichen Fakultät
der Universität zu Köln

2010

vorgelegt von
Dipl.-Wirt.-Inf. Matthias Simon Schäfer
aus
Bonn

Referent: Prof. Dr. Dr. Ulrich Derigs
Korreferent: Prof. Ulrich W. Thonemann, Ph. D
Tag der Promotion: 17. Dezember 2010

Wirtschaftsinformatik und Operations Research

Band 16

Matthias Simon Schäfer

Passenger Railway Crew Scheduling

Models, Methods, and Applications

D 38 (Diss. Universität Köln)

Contents

List of Figures	V
List of Tables	V
List of Algorithms	IX
1 Introduction	1
1.1 Outline of the Thesis	3
1.2 Contributions	6
2 Crew Scheduling at Passenger Railway Companies	9
2.1 Planning Problems at Passenger Railway Companies	9
2.1.1 Strategic Planning	10
2.1.2 Tactical Planning	12
2.1.3 Operational Planning	12
2.2 Introduction to the Railway Crew Scheduling Problem	14
2.3 Literature Survey	20
2.3.1 Surveys on Railway Planning Problems	21
2.3.2 Specific Railway Crew Scheduling Applications	21
2.3.3 Methods for Solving Crew Scheduling Problems	23
2.3.4 Comparison of Railway and Airline Crew Scheduling	26
I Models	27
3 Modeling the Generic Crew Scheduling Problem	33
3.1 Formal Problem Definition	33
3.2 A Network Flow Model	34
3.3 A Time-Constrained Multi-Commodity Network Flow Model	35
3.4 A Path-Based Multi-Commodity Network Flow Model for the GCSP	38
3.5 An Extended Model for the GCSP with Deadheads	41
3.6 An Extended Model for the GCSP with Deadheads and Layovers	42

4	Modeling the Railway Crew Scheduling Problem	45
4.1	Fundamental Concepts for Defining the RCSP Models	46
4.1.1	Legs	46
4.1.2	Single-Day Planning Period	47
4.1.3	Crew Bases	47
4.1.4	Activities	47
4.1.5	Connections	48
4.1.6	Pairings and Duties	49
4.1.7	Time Measures	49
4.1.8	Multiple-Days Planning Period	50
4.2	A Model for the Basic RCSP	52
4.2.1	Feasibility and Evaluation of Pairings	52
4.2.2	Feasibility of Crew Schedules	53
4.2.3	The Model RCSP-BASE	54
4.3	A Model for the RCSP with Deadheads	55
4.4	A Model for the RCSP with Deadheads and Layovers	56
4.4.1	Feasibility and Evaluation of Pairings	56
4.4.2	Feasibility of Crew Schedules	57
4.4.3	The Model RCSP-DHL	57
4.5	Overview of Problems and Associated Constraints	61
II	Methods	63
5	Fundamentals	65
5.1	Column Generation	66
5.2	Branch & Bound	68
5.2.1	Branching Strategies	71
5.2.2	Node Selection	73
5.3	Cutting Plane Methods	74
5.3.1	Introduction to Cutting Plane Methods	74
5.3.2	Clique Inequalities for Set-Partitioning Problems	75
5.4	Heuristics and Hybrid Methods	77
6	Solution Procedures	81
6.1	Overview of the Branch & Price & Cut Solution Procedure	81
6.2	Solving the GCSP Pricing Problem	84
6.2.1	A SPPRC Label Setting Algorithm	85
6.2.2	Generating GCSP Pairings	86
6.3	Solving the RCSP Pricing Problem	89
6.3.1	Formulating the RCSP Pricing Problem as a SPPRC	89

6.3.2	Checking the Feasibility of RCSP Labels	92
6.3.3	Generating RCSP Pairings	93
6.4	Implementing Branch & Bound	96
6.4.1	Branching Strategies in our Solution Procedure	97
6.4.2	Implementing Branchings	98
6.5	Implementing Clique Cuts	99
7	Acceleration and Relaxation Strategies	101
7.1	Leg Aggregation	102
7.2	Multi-Phase Pricing	103
7.2.1	Selecting Labels for Path Extensions	104
7.2.2	Terminating a Pricing Phase	105
7.3	Hybridization of Branch & Price with a Metaheuristic	106
7.4	The Extended Branch & Price & Cut Solution Procedure	108
III	Evaluation and Applications	111
8	Evaluation	113
8.1	Problem Instances for the GCSP	113
8.2	GCSP-BASE Computational Results	114
8.2.1	Overall Results	114
8.2.2	Comparison of Branching Strategies, Branch Selection Rules, and Search Strategies	120
8.3	GCSP-DH Computational Results	125
8.4	GCSP-DHL Computational Results	131
8.5	Problem Instances for the RCSP	137
8.6	RCSP Computational Results	138
8.6.1	Evaluation of Small Instances with Branch & Bound	139
8.6.2	Evaluation of Small Instances with B&P and B&P&C	140
8.6.3	Evaluation of Large Instances with B&P and B&P&C	143
8.7	Evaluation of Selected Acceleration and Relaxation Techniques	145
8.8	Conclusions	147
9	Design and Implementation of the DSS on.Track	151
9.1	Introduction to Decision Support Systems	151
9.2	Requirements for a Strategic Crew Scheduling DSS at DB	153
9.3	The Architecture of on.Track	154
9.3.1	The Data Component of on.Track	155
9.3.2	The Model/Method Component of on.Track	157
9.3.3	The Dialogue Component of on.Track	157

CONTENTS

9.4 Applications	159
10 Conclusions and Outlook	163
10.1 Summary	163
10.2 Critical Review and Outlook	166
References	169

List of Figures

2.1	The Railway Crew Scheduling Problem	15
2.2	Train services and legs	16
2.3	Characteristics and complexity of GCSP models	29
2.4	Characteristics and complexity of RCSP models	30
4.1	Train services and legs in a single-day planning period	46
4.2	Single-Day planning period	50
4.3	Legs of a three-day planning period	51
4.4	Multiple-Days planning period	52
5.1	Classification of exact/metaheuristic combinations	79
6.1	The exact Branch & Price & Cut solution procedure	82
7.1	Multi-Phase Pricing	104
7.2	Objective value trends	106
7.3	The extended Branch & Price & Cut solution procedure	109
9.1	DDM architecture of a DSS	153
9.2	The team categorization dialogue in on.Track	156
9.3	The reporting dashboard in on.Track	158
9.4	The pairing viewer in on.Track	159

List of Tables

2.1	Typical planning problems in passenger railway transportation	10
3.1	Artificial and dual variables in (L)CGCSP-BASE	41
4.1	Time measures. (* depends on break allocations)	50
4.2	Artificial and dual variables in (L)CRCSP-DHL	60
4.3	Problems and associated constraints	62
6.2	Attributes of a GCSP label κ	87
6.7	RCSP label	91
8.1	The 50 problem instances for the GCSP	114
8.2	Attributes of selected GCSP instances	115
8.3	GCSP results I - from 50 to 250 tasks	118
8.4	GCSP results II - from 300 to 500 tasks	119
8.5	GCSP-BASE results summary	121
8.6	GCSP results III - 0/1 branching	122
8.7	GCSP results IV - F-O branching, maxTendency	123
8.8	GCSP results V - F-O branching, leastTendency	124
8.9	GCSP-DH results summary	126
8.10	GCSP-DH results VI	127
8.11	GCSP-DH results VII	128
8.12	GCSP-DH results VIII	129
8.13	GCSP-DH results IX	130
8.14	GCSP-DHL results summary	131
8.15	GCSP-DHL results X	133
8.16	GCSP-DHL results XI	134
8.17	GCSP-DHL results XII	135
8.18	GCSP-DHL results XIII	136
8.19	Input timetables for the RCSP	137
8.20	Attributes of RCSP planning instances	138
8.21	RCSP results I - Branch & Bound	139
8.22	RCSP results II - Exact vs. inexact methods for small instances. . . .	142

8.23 Multi-Phase Pricing parameter values	143
8.24 RCSP results III - B&P vs. B&P&C	144
8.25 Effects of dominance checks	145
8.26 Returning multiple pairings	146
8.27 Single-phase vs. multi-phase pricing	147

List of Algorithms

1	Column Generation	68
2	Branch & Price	70
3	Bron-Kerbosch Algorithm	77
