Contents

Introduction	1
1 Electrostatic Screening in Dielectrics	5
1.1 Introduction.	6
1.1.1 Microscopic Point-Dipole Model	8
1.1.2 Vector-Space Notation	9
1.1.3 Obtaining the Screening Energy for Coulomb Parameters	10
1.1.4 Ferroelectric Catastrophe and Reciprocal Space	11
1.2 Screening in a One-Dimensional Chain.	15
1.2.1 Confinement to One Dimension	15
1.2.2 Analytical Solution	16
1.2.3 Screening Peculiarities	18
1.2.4 Comparison to Cluster Calculations using the Real-Space MPDM Code .	29
1.3 Screening in a Two-Dimensional Square Lattice	32
1.3.1 Confinement to Two Dimensions	32
1.3.2 Numerical Solution	33
1.3.3 Microscopic Field and Averaging	41
1.4 Screening in a Three-Dimensional Simple Cubic Lattice	42
1.4.1 Clausius-Mossotti Relation from the Microscopic Perspective	42
1.4.2 Numerical Solution for Moderate Polarizability in Real Space	45
1.4.3 Numerical Solution in Reciprocal Space.	51
1.5 Summary	53

2	Organics.	57
2.1	Electronic Structure Theory	59
2.1.1	Density-Functional Theory	59
2.1.2	Density-Functional Practice with FHI-aims	62
2.1.3	Hubbard model	68
2.2	Organics	70
2.2.1	Building Blocks – Organic Molecules	70
2.2.2	Molecular Crystals	71
2.3	Evaluation of Model Parameters	76
2.3.1	Hopping Parameters	76
2.3.2	Coulomb Parameters.	82
2.4	Application to TTF-TCNQ	89
2.4.1	The Crystal	90
2.4.2	Model Parameters	92
2.4.3	Realistic Description.	103
2.5	Application to (BEDT-TTF) ₂ I ₃	108
2.5.1	The Crystal	108
2.5.2	Model Parameters	115
2.6	Summary	123
3	Dynamical Lattice Susceptibilities from DMFT	125
3.1	Dynamical Correlation and Green’s functions	126
3.1.1	Concepts For A Microscopic Description	126
3.1.2	Microscopic Response Theory	128
3.1.3	n -body Green’s Function	130
3.1.4	Single-Particle Green’s Function	131
3.1.5	Two-Particle Green’s Function	131
3.1.6	Analytical Structure and Properties of Correlation Functions	133
3.1.7	(Non-)Interacting Green’s Functions and Self-Energy	139
3.1.8	From Green’s to Dynamical Correlations Functions.	140
3.1.9	Analytic Continuation and Padé Approximants	146
3.2	DMFT	155
3.2.1	Derivation	155
3.2.2	Self-Consistency Loop in the Hamiltonian Formalism	157
3.2.3	Exact Diagonalization as Impurity Solver	160
3.2.4	Exact DMFT Limits.	166

3.2.5	Models	.167
3.3	DMFT Dynamical Susceptibilities and Vertex Functions	.178
3.3.1	General Formalism and DMFT Approximation	.178
3.3.2	Explicit Derivation in the ED Framework	.182
3.3.3	Properties of the Two-Particle Green's Function and the Vertex	.189
3.3.4	Overview of the Actual Calculation & Tests	.192
3.4	Application to the 3-dimensional Periodic Anderson Model	.199
3.5	Summary	.206
	Summary	.207
A	Ewald Method	.211
A.1	Generalized Derivation of the Ewald Summation	.211
A.2	Ewald Summation for the Dipole Matrix	.214
A.3	Results for Body- and Face-Centered Cubic Lattices	.215
B	Euler Angles	.217
B.1	General Introduction	.217
B.2	Extracting Euler angles	.219
C	FHI-aims: Basis Sets	.221
D	Atomic units	.223
E	Massively Parallel Lanczos Solver	.225
F	Fourier transforms & Friends	.229
F.1	Infinite Continuous Fourier Transform	.229
F.2	Infinite Discrete Fourier Transform	.230
F.3	Relationship between Continuous and Discrete Fourier Transforms	.230
F.4	Convolution Theorem and Autocorrelation function	.231
F.4.1	Similar relations used in Condensed Matter Physics	.231
G	Inversion by Partitioning	.233
	Bibliography	.235
	Acknowledgements.	.245
