

Interface-Phenomena in 3C-SiC Heteroepitaxy on Silicon

Der Technischen Fakultät der
Universität Erlangen-Nürnberg
zur Erlangung des Grades

DOKTOR-INGENIEUR

vorgelegt von

Philip Hens

Erlangen 2011

Als Dissertation genehmigt von
der Technischen Fakultät der
Universität Erlangen-Nürnberg

Tag der Einreichung: 01.04.2011

Tag der Promotion: 19.05.2011

Dekan: Prof. Dr.-Ing. Reinhard German

Berichterstatter: Prof. Dr.-Ing. Peter Wellmann
Prof. Dr. Rainer Hock

Grenzflächen-Phänomene bei der 3C-SiC Heteroepitaxie auf Silizium

Der Technischen Fakultät der
Universität Erlangen-Nürnberg
zur Erlangung des Grades

DOKTOR-INGENIEUR

vorgelegt von

Philip Hens

“Those who believe they are something have stopped becoming”

(Socrates)

1	Introduction	11
1	Einleitung	13
2	Fundamentals	15
2.1	Cubic silicon carbide	15
2.1.1	Polytypism of SiC	15
2.1.2	Properties of the cubic phase	17
2.1.3	Growth and technology	18
2.1.4	Typical defects in 3C-SiC	20
2.2	Chemical Vapor Deposition for epitaxy	22
2.2.1	Definition of CVD and (hetero-) epitaxy	22
2.2.2	Principle of CVD	22
2.2.3	Precursor chemistry and speed limiting step	24
2.2.4	CVD systems and technology	26
2.2.5	Parameters of CVD and process design	29
2.3	Rapid Thermal Annealing	32
2.4	Characterization procedures	33
2.4.1	Optical microscopy	33
2.4.2	X-Ray diffraction	33
2.4.3	Scanning electron microscopy	36
2.4.4	Transmission electron microscopy	37
2.4.5	Atomic force microscopy	39
2.5	Seeding and growth	41
2.5.1	Lattice misfit	41
2.5.2	Growth and growth modes	43
2.5.3	Tammann theory	45

2.5.4	Diffusion at the interface.....	47
2.5.5	Theory of void formation.....	48
2.6	Fast sublimation growth process.....	50
2.6.1	Basics.....	50
2.6.2	Comparison to PVT technique	51
2.6.3	Parameters for 3C SiC growth	52
2.6.4	Experimental procedure FSGP	53
3	Literature review on 3C-SiC growth.....	54
3.1	CVD heteroepitaxy of 3C-SiC on silicon.....	54
3.2	Other approaches for 3C-SiC growth	57
3.3	Typical defects in cubic silicon carbide	58
3.4	Applications of cubic silicon carbide.....	59
4	Experimental results and discussion	60
4.1	Cleaning of the substrate	60
4.1.1	Wet chemical cleaning	60
4.1.2	In-situ cleaning in hot hydrogen	64
4.1.3	Influence of carbon particles during hot-hydrogen etching	69
4.1.4	Application of CP4 etch	74
4.2	Ex-situ carbonization for seed layer generation	77
4.2.1	Test of principle	77
4.2.2	Process with in-situ annealing.....	80
4.2.3	Process with external rapid thermal annealing	82
4.2.4	Theory for void generation	83
4.3	Influence of ramp-up rate on layer quality.....	86
4.3.1	Application of different ramp speeds during carbonization	87
4.3.2	Implementation of waiting steps during heating up	92

4.3.3	Use of rapid thermal annealing	95
4.3.4	Explanation of the results by Tammann theory.....	98
4.4	Study of the silicon carbide - silicon interface	102
4.4.1	Cross section TEM analysis.....	102
4.4.2	Fourier filtered imaging and dislocation structures.....	104
4.4.3	Intermediate layer.....	106
4.4.4	Interface roughness.....	107
4.5	Growth on wet-chemically textured substrates	109
4.5.1	Generation of pyramidal texture by wet chemical etching.....	109
4.5.2	Seeding on pyramidal side facets	110
4.5.3	Intermediate stage and missing overgrowth mechanism	113
5	Supplement: Growth of thick layers by FSGP on CVD-templates.....	118
5.1	Thickening of CVD grown layers on silicon	118
5.2	Fabrication of freestanding 3C-SiC material	119
5.3	Quality improvement during FSGP.....	121
5.4	Defects limiting the layer quality.....	127
6	Summary	131
6	Zusammenfassung	134
7	References	137
8	List of figures	149
9	List of own publication	157
