

INSTITUTE OF AGRICULTURAL ENGINEERING

Universität Hohenheim

Chair in Agricultural Engineering in the Tropics and Subtropics

Prof. Dr. J. Müller

**Infrared Imaging for Monitoring Plant Responses to Water
Stress under Different Irrigation Regimes**

Dissertation

Submitted in fulfilment of the requirements for the degree

“Doktor der Agrarwissenschaften”

(Dr.sc.agr. / Ph.D. in Agricultural Sciences)

to the

Faculty of Agricultural Sciences

presented by

Shamaila Zia

from New Delhi, India

2012

This thesis was accepted as a doctoral dissertation in fulfilment of the requirements for the degree “Doktor der Agrarwissenschaften” by the Faculty of Agricultural Sciences at University of Hohenheim on 26.02.2012

Date of oral examination: 23.07.2012

Examination Committee

Deputy of the Dean

Prof. Dr.-Ing. Stefan Böttinger

Supervisor and Reviewer

Prof. Dr. Joachim Müller

Co-Reviewer

Prof. Dr. Roland Gerhards

Additional examiner

Prof. Dr. Dr. hc. mult. Karlheinz Köller

This work was conducted within the Sino-German International Research Training Group “Modeling Material Flows and Production Systems for Sustainable Resource Use in Intensified Crop Production in the North China Plain” funded by the Deutsche Forschungsgemeinschaft (DFG)

Schriftenreihe des Lehrstuhls für Agrartechnik in den Tropen und
Subtropen der Universität Hohenheim
herausgegeben von Prof. Dr. Joachim Müller

Band 05/2012

Acknowledgement

To my supervisor, Prof. Dr. Joachim Müller for giving me the opportunity to work on this research project and his indispensable advice, guidance, encouragement and patience throughout the project.

I would also like to pay my gratitude to Dr. Wolfram Spreer and Dr. Klaus Spohrer for their tireless support during the whole research work, as well as the timely advices and support without which it would have taken much longer time to accomplish the work.

To my Chinese supervisor Prof. He Xiongkui for supporting the research activities in China and counterpart Du Wenying for his valuable translations at the research station and support in organizing the equipments, meetings and travels within China. To the Deutsche Forschungsgemeinschaft (DFG) for their generous funding over the last years. To the staff at the Institute of Agricultural Engineering, Frau Binder, Frau Nugent, Frau Lehmann, Frau Amberg and Frau Zahlecker, many thanks for your daily assistance.

To my family, from far away for encouraging me to continue pursuing my dream and their unwavering love and support. To my husband Shaz Mohd. Khan for standing by so devotedly. To all my friends in Germany, China, India, and indeed around the world for giving me inspiration and motivation.

Thank you all.

Shamaila

Contents

1	General introduction	1
1.1	Crop water status measurement methods	1
1.2	Impact of drought on physiological processes and growth	2
1.2.1	Annual crops	2
1.2.2	Perennial crops	3
1.3	Principle of thermal imaging	4
1.4	Application of thermal imaging for stress monitoring in agriculture	4
1.5	Thesis outline.....	6
2	Non-invasive water Status detection in Grapevine (<i>Vitis vinifera</i> L.) by thermography	13
2.1	Introduction	13
2.2	Materials and Methods	14
2.2.1	Thermal imaging.....	15
2.2.2	Other measurements	16
2.3	Results	16
2.3.1	Thermal image analysis	17
2.3.2	Leaf temperature and CWSI measurements for identifying the water status	19
2.3.3	Relationship between leaf water potential, stomata conductance and CWSI	20
2.4	Discussion.....	22
2.5	Conclusions	23
3	Monitoring physical response to water stress in two maize varieties by infrared thermography	27
3.1	Introduction	27
3.2	Materials and methods	29
3.2.1	Experiment design	29
3.2.2	Thermal imaging.....	29
3.2.3	Ambient and plant water status monitoring.....	30
3.3	Results	30
3.4	Discussion.....	36
3.5	Conclusions	38

4	Use of thermography for high throughput phenotyping of tropical maize adaptation in water stress	43
4.1	Introduction	43
4.2	Materials and methods.....	46
4.2.1	Location.....	46
4.2.2	Irrigation scheduling.....	46
4.2.3	Thermal images acquisition.....	48
4.2.4	Crop water stress index.....	49
4.2.5	Measurements of biomass formation and yield.....	50
4.2.6	Data analyses and statistics.....	50
4.3	Results	51
4.3.1	NDVI, chlorophyll index and yield	51
4.3.2	Difference within genotypes.....	53
4.3.3	Difference between water-stressed and well-watered plants.....	56
4.4	Discussion.....	57
4.5	Conclusions	59
5	Assessing water stress of winter wheat by thermography under different irrigation regimes in North China Plain	63
5.1	Introduction	63
5.2	Materials and Methods	64
5.2.1	Experimental site.....	64
5.2.2	Irrigation treatments and experimental design	65
5.2.3	Soil moisture and stomatal conductance measurements.....	65
5.2.4	Image acquisition and analysis	66
5.2.5	Data analysis and statistics	67
5.3	Results	68
5.3.1	Weather parameters and soil moisture.....	68
5.3.2	Relationship between soil water content and canopy temperature	69
5.3.3	Seasonal variation of CWSI and stomata conductance	69
5.3.4	Relationship between CWSI and stomatal conductance	71
5.3.5	Diurnal variations of CWSI.....	72
5.3.6	Yield and WUE.....	73
5.4	Discussion.....	75
5.5	Conclusions	77
6	General Discussion	81
6.1	Potential of thermography for estimating stomatal conductance	82
6.2	Thermography as a tool for yield estimation.....	83

6.3	Influence of reference surfaces on the determination of CWSI	84
6.4	Sensitivity analysis of thermography	85
6.5	Conclusions	86
6.6	Future Perspectives.....	86
6.6.1	Automization of canopy temperature determination	86
6.6.2	Precision irrigation	87
7	Summary	93
8	Zusammenfassung	97
