

# **On the Industrial Crystallization of Proteins**

Habilitationsschrift

zur Erlangung des akademischen Grades

Dr.-Ing. habil.

vorgelegt dem

Zentrum für Ingenieurwissenschaften

der Martin-Luther-Universität Halle-Wittenberg

als organisatorische Grundeinheit für Forschung und Lehre im Range einer Fakultät

(§ 75 Abs. 1 HSG LSA, § 19 Abs. 1 Grundordnung)

von

Herrn Matthew Jonathan Jones, PhD

geb. am: 06. August 1967 in: Rinteln

Gutachter

1. Professor Dr.-Ing. habil. Dr. h.c. Joachim Ulrich (ZIW, MLU)
2. Professor Dr. rer. nat. habil. Dr. h.c. Reinhard Neubert (Pharmazie, MLU)
3. Professor Dr. Gérard Coquerel (Université de Rouen, Frankreich)

Halle (Saale), 9. Dezember 2014

## Acknowledgements

I wish to express my gratitude to all who have enabled, encouraged and supported the work presented here.

First and foremost my thanks go to Professor Joachim Ulrich for having sufficient faith in the value of my idea to study the large scale crystallization of proteins to provide me with the opportunity to carry out this research. The many fruitful discussions in the time we worked together helped me develop and grow as a scientist. His continuous support and encouragement was an essential and much appreciated contribution to the success of this work.

A large part of the work presented here would not have been possible without the efforts of the numerous PhD-, Diplom-, Masters-, and undergraduate project students I supervised during my time in Halle. In particular I would like to thank Dr Maxim Weber and Dr Naser Aldabaibeh for their sterling work, as well as for the many stimulating and at times very lively discussions and debates. I also thank Dr Bo-Hyun Ryu for her contribution to the solvent freeze-out technology.

My gratitude also goes to Professor Markus Pietzsch and Dr Thomas Hertel for their hospitality in the early stages of this work, allowing me and my students to work in their laboratories, for patiently teaching us the techniques necessary for the characterisation of our samples and for their continuing interest in our progress and the many valuable discussions we had along the way.

I also wish to thank all my friends for their support and encouragement, in particular Anke and Christian Marx, Aniko Szepes and Sabrina Pfennig, as well as my former colleagues from the Thermische Verfahrenstechnik research group who contributed by sharing the pleasure (and the pain) of research and university life and made my time in Halle a positively memorable experience.

Finally, my heartfelt gratitude to my parents Regine and Keith Jones and to my sister, Dr Nicola G. Jones, who supported me all the way, through thick and thin, without ever doubting.

# Table of Contents

1.	Introduction	1
2.	Thermodynamics of Protein Solutions - Solubility	4
2.1	Measurement of Solubility	4
2.2	Solubility of Selected Proteins - Compilation of Literature Data	8
2.3	Crystal Modifications of Lysozyme	11
2.4	Solubility of Lysozyme Chloride	14
2.5	Analysis of the Solubility of Lysozyme Chloride Modifications in Terms of the Enthalpy and Entropy of Crystallization	36
2.6	Nephelometric 'Solubility' Measurement	39
2.7	Second Osmotic Virial Coefficient	41
3.	Kinetics of Protein Crystallization	47
3.1	Nucleation	47
3.1.1	Early Protein Nucleation Studies	49
3.1.2	Pre-Nucleation Particle Aggregation	50
3.1.3	Induction Time Measurements	52
3.1.4	Calorimetric Studies of Nucleation	54
3.1.5	Turbidity Measurements	55
3.1.6	Generalised Solution Phase Diagram	55
3.1.7	Liquid-Liquid Phase Separation as a Precursor to Nucleation	58
3.1.8	Two-Step Nucleation Model	59
3.2	Crystal Growth	62
3.2.1	Growth Rate Measurements	63
3.2.1.1	Overall Linear Growth Rates	64
3.2.1.2	Face Growth Rates	66
3.2.1.3	Mechanistic Studies	67
4.	Crystallization Process Technology – Applicability to Protein Products	68
4.1	Solution Crystallization	68
4.2	Case Study I: Extraction and Crystallization of Urease from Jack Bean Meal	70

4.2.1	Extractions from Jack Bean Meal	71
4.2.2	The Influence of Process Parameters on Extraction and Solid-Liquid Separation	76
4.2.2.1	Extraction Duration and Mixing Intensity	76
4.2.3	Variation of Crystallization Conditions	78
4.2.3.1	Solvent Composition	78
4.2.3.2	Temperature	79
4.2.3.3	Mixing	80
4.2.3.4	Solid-Liquid Separation	81
4.2.3.5	Post-Crystallization Treatment: Washing and Recrystallization	82
4.2.3.6	Summary of Urease Case Study	83
4.3	Case Study II: Combined Solid Layer Melt Crystallization and Solution Crystallization	84
4.3.1	Introduction	84
4.3.2	Application of Combined Solid Layer Melt and Solution Crystallization to the Manufacture of Lysozyme Chloride	87
4.3.2.1	Experimental Set-Up	87
4.3.2.2	The Effect of the Ice Growth Rate on Protein Loss	88
5.	Outlook	94
6.	Summary	96
7.	List of Symbols and Abbreviations	97
7.1	Symbols	97
7.2	Abbreviations	99
8.	References	100
