

Selective redox biocatalysis in multiphasic enzyme reactors

Zur Erlangung des akademischen Grades eines
Dr.-Ing.
von der Fakultät Bio- und Chemieingenieurwesen
der Technischen Universität Dortmund
genehmigte Dissertation

vorgelegt von
M. Sc. Bartłomiej Tomaszewski
aus
Łódź, Polen

Tag der mündlichen Prüfung: 25.07.2014
1. Gutachter: Prof. Dr. Andreas Schmid
2. Gutachter: Prof. Dr. Norbert Kockmann

Dortmund 2014

ACKNOWLEDGMENTS

This work wouldn't be possible without very many people to whom I'm deeply indebted. I would like to thank Prof. Andreas Schmid – my doctor father – for hiring me and for telling me that ‘the hummer can be used for building a road or a church’. I will carry that knowledge and remember to look back on the techniques I've learned and skills I've gained for tackling challenges that I will come across.

I want to thank Dr. Katja Bühler for her patience in supervising me, for hours spent on discussions with me, and for teaching me English in scientific writing. You were the best supervisor I could think of. I will always admire your super-human time management skills.

Dr. Rohan Karande, a big, down from the heart thank you for being a friend and a mentor. Your help was simply invaluable. I appreciate every discussion we had during and after lunch. Thank you for sharing your wisdom with me.

I want to acknowledge my office colleagues Kerstin Lange, Karolin Schmutzler, Babu Halan, and Christian Willrodt – you cared for keeping the high spirits, helped in deciding if a new idea is worth following, and made every mundane day of the work easier.

All the current and former BT members: Prof. Dr. Andreas Schmid, Dr. Babu Halan, Dr. Birgitta Ebert, Dr. Bruno Bühler, Dr. Daniel Kuhn, Dr. Eleni Theodosiou, Dr. Francesco Falcioni, Dr. Frank Eiden, Dr. Hendrik Kortmann, Dr. Jana Rühl, Dr. Jonathan Collins, Dr. Karin Hofstetter, Dr. Katja Bühler, Dr. Lars M. Blank, Dr. Linde Debor, Dr. Manfred Schrewe, Dr. Mattijs Julsing, Dr. Oliver Frick, Dr. Özde Ütkür, Dr. Rainer Gross, Dr. Rohan Karande, Dr. Sjeff Cornelissen, Anja Kulmsee, Christian David, Christian Dusny, Christian Willrodt, Christine Wasilewski, Frederik Fritzsche, Jan Volmer, Jianan Fu, Jochen Lutz, Kamila Kozłowska, Karolin Schmutzler, Karsten Lang, Katrin Rosenthal, Kerstin Lange, Kirsten Köhler, Marcel Grund, Martin Lindmeyer, Marvin Kadisch, Michael Hillen, Mustafa Uyan, Nadine Ladkau, Patty Krabbe, Sabine Vogt, Stefan Ladkau, Stefanie Holmes, Suresh Sudarsan, and Verena Oehling I would like to thank for the great atmosphere during the working hours and good, highly needed time of relax after work. I thank Dr. Bruno Bühler for organising skiing trips to Davos and Betriebsausflugs to Tessin. Thank you all for joining the trip to Zandvoort. I want to thank Karolin Schmutzler, Jianan Fu, and Marcel Grund for the nights out in vivid dining venues of Dortmund and weekend walks to Westpark. Dr. Linde Debor and Dr. Manfred Schrewe I want to thank for being good friends. Dr. Jonathan Collins for sharing his passion for chemistry with me.

I would like to acknowledge my collaborators at Delft University of Technology: Dr. Frank Hollmann, Dr. Ekaterina Churakova, Dr. Paul Könst for their help and support during my visit; from Dr. Reddy's Laboratories I'm indebted to Dr. Richard Lloyd, Dr. Peter

McCormack, and Tony Warr for giving me the insight into the industrial world and their guidance.

I would like to cordially thank Christine Wasilewski, Anja Kulmse and Stefanie Holmes for helping me with German bureaucracy, with paper-work and translations, and for representing me in front of university officials when I couldn't speak for myself.

Droga Krystyno, dziękuję za polski pierwiastek w Dortmundzie i pełne zrozumienia rozmowy. Za tłumaczenia. Za Twój uśmiech, nigdy niesłabnący entuzjazm, oraz pełne jądła i polskiej gościnności śniadania i imprezy pożegnalne.

I want to thank colleagues from the BMP for providing their expertise in a lab and crash-courses in synthetic organic chemistry (Matthias Thiel, Peter von Czarnecki, Stefan Konieczny, and Arne Straßburg)

I am thankful to Prof. Nicolas Turner and Prof. John Whittall for managing the BIOTRAINS Marie Curie Initial Training Network, and the European Union for financing this work through the seventh Framework People Program (grant agreement number 238531).

I want to thank Elena Zwar from the Faculty of Physical Chemistry, who helped me with a pendant drop tensiometer.

I thank my reviewers Prof. Andreas Schmid, Prof. Norbert Kockmann and Prof. Rolf Wichmann for critical reading of this thesis and suggesting changes that led to its improvement.

My friends, Dominika A. Bijoś and Julian Sikorski from my 'PhD support group' I thank for their time when we talked and for easing my frustration.

To Małgorzata Płociniczak, my girlfriend, who helped me a lot during my last busy year of the PhD, before and after I moved to Iceland. Thank you for understanding me, for being patient.

My biggest thanks goes to my family who stood next to me. Although every day we were separated by nearly a thousand kilometres, I could always count on You, I'm deeply indebted to You for Your constant believe in me, for prayers, and for ensuring me how important and great is what I am doing.

TABLE OF CONTENTS

Acknowledgments.....	i
Table of contents	iii
List of abbreviations and symbols	iv
Summary	vi
Zusammenfassung.....	vii
Chapter 1 - Introduction.....	1
Redox reactions	2
Isolated Enzymes vs whole cell biocatalysts	4
Interesting enzymes for cell free applications.....	8
Multiphasic reactions – advantages, limitations and current application.....	11
Chapters’ summary	23
Aims of the thesis.....	23
Chapter 2 - Preparation and characterisation of 2-hydroxybiphenyl 3-monooxygenase (HbpA) and formate dehydrogenase (FDH).....	25
Chapter 3 - Functional Combi-CLEAs of FDH and HbpA applied in a two-liquid phase system.....	49
Chapter 4 - Hydrophobic formic acid esters for cofactor regeneration in aqueous/organic two-liquid phase systems	67
Chapter 5 - Regioselective biocatalytic aromatic hydroxylation in a gas/liquid multiphase tube-in-tube reactor	79
Chapter 6 - Biocatalytic preparative synthesis of catechols using a high pressure tube-in-tube segmented flow microreactor	101
Chapter 7 - General discussion	125
Definition of the microchannel and the dimensionless numbers	126
How do shear and interfacial forces influence protein stability and can they induce a quaternary structure loss?.....	130
Kinetic model of the reaction.....	130
Before scale-up - unit operations and process intensification.....	139
Concluding remarks – System boundaries defined.....	145
Chapter 8 - Summary and outlook - keep the big picture in mind	149
References	157
Appendix	167
Curriculum Vitae	181
