

The Development and Molecular Characterization of Muscle Spindles from Wildtype and Mutant Mice

Dissertation

zur Erlangung des Doktorgrades (Dr.rer.nat) der Fakultät für
Biologie an der Ludwig-Maximilians Universität München

angefertigt in der Arbeitsgruppe von Prof. Dr. Stephan Kröger
am Institut für Physiologische Genomik, LMU München

Für meine Familie

For my family

Acknowledgements

First and foremost I would like to thank **Prof. Stephan Kröger** for giving me the opportunity to perform my PhD Thesis in his laboratory. I want to thank him for his constant support, for sharing his great knowledge in neuroscience and for sharing his experience on giving a talk. He was always friendly and patient. He was encouraging me, following my project with great interest, discussing with me and guiding me to the right direction whenever necessary. Thank for the relaxing environment in his lab, so that I enjoyed the process on doing research.

Thanks to **Prof. George Boyan** for being my supervisor from the Department of Biology and member of my thesis committee meeting; contributing ideas and copious discussion. Thanks to **Dr. Ilona Kadow** for being on my thesis committee, and being an excellent example, doing science with kids, this encouraged me a lot. I would also like to thank **Prof. Magdalena Götz** and the Graduate School HELENA at the Helmholtz Centre for funding my PhD and allowing me to take part in conferences.

I am truly grateful to **Dr. Shuo Lin** and **Prof. Markus Rüegg** for the kind collaboration and breeding agrin knockout mice for me. Thanks to **Prof. Veit Witzemann** for nice discussions, both scientifically and non- scientifically and for providing transgenic mice. Thanks to **Prof. Martin Kerschenstener** for providing Thy1-YFP 16 mouse line. I would also thank to **Monica, Michele, Miriam, Yvonne** and all colleagues in our THS44 animal faculty, for taking care of my mice.

Thanks to **Dr. Ahmed Messoudi** and **Dr. Anja Bochtler** for the great collaboration and discussion and thanks to **Dr. Lydia Sorokin, Dr. Wilko Altmann, Prof. Rüdiger Rudolf** and **Prof. Claire Legay** for sharing antibodies.

I want to thank **Katja Peters** for excellent technical support, moreover, for improving my German. I would also like to thank **Ines Mühlhahn** for helping me in CsCl DNA preparation, in using devices with her excellent guidance. Great thank to **Lana Polero, Elsa Melo** and **Suada Ajanovic** for taking care all the small things, which are actually very important, such as contract extension, registration for business trip etc.

I am truly glad to have had a lot of great scientific discussions with **Alex Pevzner, Julia Meltoranta, Andormachi Karakatsani, Anna Schick, Christiane Gasperi, Vivian Westermayer, Marta Wesolowski, Rebeca Sadler and Sarah Feldkirchner**. Thank you for all the lab girls, for the nice time we spend together, thank you for your encouragement, your care and your smile. Thanks to Julia for professional photo shootings, thank Christiane for sharing wonderful classic music, thank Alex, Katja and Marta to have so much fun in the lab, thanks to Becky to correct my English, thank all of you, lovely girls. Special thanks to my companion in arms ---- Andromachi, we spend most time together, complaining to each other, encouraging each other, discussing with each other, now we are almost reach the destination, just persisting the last distance. Of course, I also want to thank my friends in the neighbour lab, **Sergio Gascon, Felipe Ortega de la O, Francesca Vigano, Aditi Deshpande, Sophia Bardehle, Elisa Murenu and Sofia Grade**. Thanks for sharing your opinions, for discussion, for chatting, for all the time we spent together.

Lastly, I want to thank the most important people in my life: thanks to my husband, **Jun Li** for always believing in me, encouraging me and for his constant support. Thank you for giving me our lovely daughter! Thank my daughter, **Feiya** to forgive me away from her for so many hours every day. I am most thankful to my **parents** and **parents in law**. It is you, my mother and my mother in law, who was travelling from China at least 24 hours to Munich every six months and stayed with me for three month alternately. You were not only taking care of my child, but also taking care of me, so that I could be concentrated in my PhD thesis. Without you, I would not have managed to complete my PhD.

Thank all of you so much!!!

Yina Zhang

Eidesstattliche Erklärung

Ich versichere hiermit an Eides statt, dass die vorgelegte Dissertation von mir selbstständig und ohne unerlaubte Hilfe angefertigt wurde.

(Unterschrift)

Table of Contents

Abstract	1
Zusammenfassung	3
1. Introduction.....	5
1.1 Structure of muscle spindles	5
1.2 Functions of muscle spindles	9
1.3 Development of muscle spindles in mice	13
1.4 Synaptogenesis at the NMJ	15
1.4.1 Cholinergic specialization at the NMJ	15
1.4.2 Regulation of the γ - to ϵ -subunit change.....	16
1.5 The Agrin/MuSK/LRP4 signalling pathway	16
1.5.1 Functions of agrin.....	18
1.5.2 The agrin receptor complex: MuSK and LRP4	19
2 Aims of study.....	21
3 Materials and Methods	23
3.1 Chemicals	23
3.2 Antibodies.....	24
3.2.1 Primary antibodies.....	24
3.2.2 Secondary antibodies.....	25
3.3 Methods	26
3.3.1 Molecular methods	26
3.3.2 Cell and tissue culture methods	27
3.3.3 <i>In vivo</i> methods.....	28
3.3.4 Immunohistochemistry.....	31
3.3.5 Electron microscopy.....	32
3.3.6 Image processing	32
3.3.7 Data analysis	33
4 Results.....	35
4.1 Distribution of extracellular matrix proteins in muscle spindles.....	35
4.2 Cholinergic specializations in adult muscle spindles	40
4.3 Active zones at the endplates of alpha- and gamma- motoneurons	43
4.4 Development of AChR subunit composition in muscle spindles.....	45
4.5 The role of agrin and its receptor complex during muscle spindle development	49
4.6 The role of agrin during the development of muscle spindles	54
4.6.1 Morphological alterations of agrin mutant muscle spindles	54
4.6.2 Identification of "pre- and postsynaptic" molecular characteristics at sensory nerve endings in muscle spindles of agrin-deficient mice.....	59
In summary, these results show that deficiency of agrin affects neither the expression of AChRs nor the distribution of active zone-specific proteins.....	60
5 Discussion	61
5.1 Basement membrane in muscle spindles	62
5.2 Cholinergic specialization in muscle spindles	63
5.3 The development of AChR ---- Gamma to epsilon subunits switch.....	67
5.4 The role of Agrin-MuSK-LRP4 signalling in the development of muscle spindles.....	70

5.4.1	Expression of agrin and its receptors in γ -motoneurons and DRG neurons	70
6	Appendix	73
6.1	List of abbreviations	73
6.2	List of Figures	75
6.3	List of Tables	76
	Reference	77
	Curriculum Vitae	89
