## I. Acknowledgements

This PhD study was conducted during my time as research assistant at the Department of Mineral Processing (AMR) at RWTH Aachen University.

Firstly, I would like to express my sincere gratitude to my advisor and head of the department, Univ. Prof. Dr.-Ing Hermann Wotruba, for his scientific supervision and continuous input. I am deeply grateful for all the opportunities he gave me to gain insight into many different scientific fields and projects far beyond the scope of this thesis.

Besides my advisor, I would like to thank Univ. Prof. Dr. rer. nat. Rainer Telle for reviewing this thesis and giving profound and critical feedback.

Unfortunately, I cannot mention each and everyone who contributed to my test work. However, I want to thank some people representative of everybody who helped me throughout my research. Special thanks go to my colleagues within the REFROSPORT project as well as Marcel Bosling who were all a source of great collaboration.

I am particularly indebted to my colleague and friend Kilian Neubert for many fruitful discussions and continuous critical and profound feedback that incited me to widen my perspective.

The most interesting and challenging task cannot make up for the people I spent most of my time with. Therefore, I want to express my deepest gratitude to all colleagues and people I worked with during my time at AMR. Special thanks go to Christa Simons who is mainly responsible for the great atmosphere at AMR.

My sister, Jette Knapp, helped me through several battles I, as a non-native speaker, had to fight with the English language and deserves many thanks for her patience.

Last but not least, I would like to thank my family and my wife for their unfailing support and encouragement throughout my studies, the time at AMR, and life in general. This accomplishment would not have been possible if it had not been for them.

## II. Table of contents

I.	Acknowledgements .....	I
II.	Table of contents .....	II
1	Introduction.....	1
2	Refractories .....	3
2.1	Refractory market and applications.....	3
2.2	Types of refractories .....	5
2.2.1	Alumina-based refractories .....	5
2.2.2	Magnesia refractories.....	6
2.2.3	Doloma refractories.....	7
2.3	Raw material sources for the production of refractories .....	8
2.4	Summary of refractories .....	10
3	Recycling of refractories.....	12
3.1	Requirements for recycled refractories .....	12
3.2	Current practice in recycling of refractories .....	13
3.3	Limits of current recycling.....	16
3.4	Summary of recycling of refractories.....	20
4	Sample preparation.....	22
4.1	Cylinders .....	22
4.1.1	Magnesia carbon without antioxidant .....	23
4.1.2	Magnesia carbon with antioxidant.....	24
4.1.3	Fired magnesia.....	25
4.1.4	Fired doloma .....	26
4.1.5	Doloma carbon .....	27
4.1.6	Fired bauxite .....	28
4.1.7	Fired andalusite .....	29
4.1.8	Fired chamotte .....	30
4.2	Pellets .....	31
