Development of Coupled Offline Robot Trajectory Generation and Coating Simulation for Thermal Spray Processes

Entwicklung einer Methode zur Kopplung der Offline-Generierung von Robotertrajektorien mit Prozesssimulationen bei der thermokinetischen Beschichtung

Development of Coupled Offline Robot Trajectory Generation and Coating Simulation for Thermal Spray Processes

Entwicklung einer Methode zur Kopplung der Offline-Generierung von
Robotertrajektorien mit Prozesssimulationen bei der thermokinetischen Beschichtung

von der Graduate School of Excellence advanced Manufacturing Engineering
GSaME der Universität Stuttgart
zur Erlangung der Würde eines Doktor-Ingenieurs (Dr.-Ing.)
genehmigte Abhandlung

vorgelegt von
M.Sc. Eng. Mohamed Elhoriny
aus Ägypten

Hauptberichter : o. Prof. Dr. rer. nat. Dr. h.c. mult. Rainer Gadow
Mitberichter : Prof. Dr. Alain Denoirjean
Vorsitzender : Prof. Dr.-Ing. habil. Bernhard Mitschang

Tag der Einreichung : 12.10.2016
Tag der mündlichen Prüfung : 24.05.2017

Institut für Fertigungstechnologie Keramischer Bauteile - IFKB

Accomplishing my Doctoral degree at the Graduate School GSaME of the University of Stuttgart was an interesting and challenging stage of my life. Throughout the doctoral journey I got to meet many professionals with whom I exchanged a lot of information and from whom I acquired a lot of new Knowledge. It was my honour to get introduced to those respectful professors and colleagues in the GSaME and in the Institute for Manufacturing Technologies of Ceramic Components and Composites (IMTCCC) at University of Stuttgart. I hereby would like to take the opportunity to express my thanks to the German Research Foundation (DFG) for financially supporting this doctorate.

My most sincere gratitude goes to my supervisor o. Univ.-Prof. Dr. rer. nat. Dr. h.c. mult. Rainer Gadow for granting me his trust and guidance throughout the doctoral program. His personal and professional support was and will still be enlightenment for pursuing more challenging accomplishment in my future. Being a doctoral candidate under his supervision was indeed a valuable experience which most importantly taught me how a reputable professor can support younger researchers flourish. I wish I would effectively pass the knowledge further to my students on and gain their respect as he gained mine.

My special thanks go to Prof. Dr. Alain Denoirjean for offering his time and showing interest in evaluating the dissertation content. I would also like to thank Prof. Dr.-Ing. habil. Bernhard Mitschang for his contributions during the evaluation milestones throughout my research and for his role as chairman in my doctoral examination.

I would also extend my gratitude to apl. Prof. Dr. rer. nat. Andreas Killinger, head of the surface technologies department at IFKB, for his scientific and technical support. His guidance and motivation during the complicated phases of the projects was indeed a valuable pillar for accomplishing this dissertation.

Equally important is to show my gratefulness to Dr.-Ing. Martin Wenzelburger and Dr.-Ing Mirian Floristán-Zubieta for their support to get the research on track in the initial phases of the dissertation. Yet, their joyful company was nothing less important than their scientific support.

Special thanks go to Prof. Dr. José Andrés Moreno Nicolás at the university of Cartagena, Spain for dedicating a noteworthy amount of his time for supporting the research presented in this dissertation. His scientific cooperation and hospitality during my research stay in Cartagena are indeed a life time debt I owe him.

I am also deeply indebted to my colleagues and friends Dr.-Ing Mohamed Abu-Elezz, Dr.-Ing. Houssam-Eddine Bessam and Dipl.-Ing. Venancio Martínez García for their sincere and valuable conversations and company. They contributed to enriching my dissertation journey with precious memories and valuable life lessons.

My warmly thanks also go to M.Sc. Eng. Kamran Taheri, M.Sc. Eng. Phuong Vu, the rest of the colleagues at IMTCCC and the students I supervised for the scientific contributions and good working atmosphere during these years. Additionally, I would like to extend my thanks to Prof. Dr. Ashraf Mansour, the German University in Cairo and Prof. Dr. Elsayed Inam Morgan for the continuous support.

My deep thankfulness is owed to my friend M.Sc. Eng. Yomna Abdelrahman for her engagement in getting this dissertation professionally finished. Her dedicated time, pleasant company and encouragement are an unforgettable experience of how friends can be a treasured support. Not to forget, I would also like to acknowledge my debt to my colleague Dipl.-Ing. Martin Plachetta for his linguistic contribution to this dissertation and his well-reasoned scientific advice.

Gratefulness is only part to the appreciation I hold towards my family Eng. Sobhy Essawy, Esq. Elsayed Essawy, Brig. Gen. Hesham Khadr, Esq. Nabiha Essawy, Mrs. Nora Essawy, Mrs. Fawkeya Elhoriny, Eng. Mostafa Noweir, Eng. Mohamed Noweir, Dr. Nada Essawy, Dr. Mostafa Essawy, Miss. Nagham Essawy and Mr. Mostafa Elsayed Essawy. Their continuous motivation, appreciate and sense of belonging are without any doubt key factors for encouraging me realize the doctoral accomplishment.

Additionally, I would like to show my gratitude to my dear life-long friends Dr.-Ing. Tarek Zaki, M.Sc. Eng. Ibrahim Sadek, M.Sc. Eng. Ahmed Enany, M.Sc. Eng. Ahmed Ayad, Eng. Mohamed Elkady, Eng. Youssef El-Abd and Dr. Rana-Elmahallawy who kept up through with me throughout my doctoral journey.

Last and most close to my heart, I would like to express my deep gratitude to my mom Dr. Nadia Mostafa Essawy and my not-for-long lamented dad Esq. Abdelhalim Saleh Elhoriny. They deserve all the appreciation and gratefulness for their care, support, motivation, patience, belief and unconditional giving throughout each and every step I had to cross in my life. This thesis and all my accomplishments are dedicated to my parents, as they all would have certainly not excited without them.

Stuttgart, October 2016

Mohamed Elhoriny
