**Multiscale Euler/Lagrange approach
to simulate finite-sized solid particles
and bubbles as well as numerical and
experimental studies to improve the
modeling of complex bubble motion**

Multiscale Euler/Lagrange approach to simulate finite-sized solid particles and bubbles as well as numerical and experimental studies to improve the modeling of complex bubble motion

Dissertation
zur Erlangung des akademischen Grades

Doktoringenieur
(Dr.-Ing.)

von Diplom-Wirtschaftsingenieur Thomas Reichardt
geb. am 17.05.1979 in Naumburg

genehmigt durch die Fakultät für Verfahrens- und Systemtechnik
der Otto-von-Guericke-Universität Magdeburg

Promotionskommission: Prof. Dr.-Ing. habil. Dominique Thévenin (Vorsitz)

Prof. Dr.-Ing. habil. Martin Sommerfeld (Gutachter)
Prof. Dr. Gretar Tryggvason (Gutachter)
Prof. Dr.-Ing. habil. Jochen Fröhlich (Gutachter)

eingereicht am: 26.06.2017

Promotionskolloquium am: 12.02.2018

Berichte aus der Strömungstechnik

Table of contents

Brief summary	v
Kurzzusammenfassung	vii
1. Introduction	1
1.1. Problem statement	1
1.1.1. Multiphase flow	4
1.1.2. Turbulent flow	5
1.2. This thesis	7
2. Euler/Lagrange approach with spatially extended coupling	11
Abstract	11
2.1. Introduction	12
2.2. Numerical method	19
2.2.1. Continous phase	19
2.2.2. Dispersed phase	21
2.2.3. Particle-fluid coupling	26
2.2.4. Fluid-particle coupling	30
2.2.5. Collision models	32
2.2.6. Timing of the phases	40
2.3. Examples and validation	42
2.3.1. Single particle	42
2.3.2. Drafting-kissing-tumbling phenomenon	51
2.3.3. Particle swarm	62
2.3.4. Single bubble	66
2.3.5. Bubble swarm	70
2.3.6. Non-spherical bubbles	75
2.3.7. Three-phase system	77
2.4. Conclusions and outlook	83

3. Effect of velocity fluctuations on the rise of buoyant bubbles	89
Abstract	89
3.1. Introduction	90
3.1.1. Bubble motion in turbulent flows	90
3.1.2. Motivation and scope of the study	95
3.2. Problem setup	95
3.3. Numerical method	97
3.4. Results and discussion	100
3.4.1. Effect of the domain size	102
3.4.2. Effect of forcing on the flow field	107
3.4.3. Effect of forcing on bubble trajectories and velocities	116
3.4.4. Effect of forcing on bubble axes, deformability and orientation	125
3.4.5. Frequency analysis of bubble velocities, bubble axes and bubble orientation	133
3.5. Conclusions and outlook	138
4. Stereoscopic imaging for analyzing bubble oscillation in turbulence	141
Abstract	141
4.1. Introduction	142
4.1.1. Experimental studies of bubble motion	143
4.1.2. Modeling of bubble motion and bubble oscillation	147
4.1.3. Motivation and scope of the study	154
4.2. Experimental setup	155
4.2.1. Experimental facility	155
4.2.2. High-speed imaging system	157
4.2.3. Laser Doppler velocimetry (LDV)	159
4.3. Measurement techniques	160
4.3.1. Calibration technique of the imaging system	160
4.3.2. Image processing	163
4.3.3. Liquid velocity measurement	165
4.3.4. Bubble velocity measurement	170
4.3.5. Drag coefficient measurement	172
4.4. Results and discussion	173
4.4.1. Single phase flow	173
4.4.2. Evolution of bubble motion with height for stagnant water versus up-flow	178

4.4.3. Samples of instantaneous bubble motion for stagnant water versus up-flow	183
4.4.4. Types of bubble motion for stagnant water versus down-flow	193
4.4.5. Bubble velocities	196
4.4.6. Bubble shape deformation	204
4.4.7. Bubble orientation and motion angle	209
4.4.8. Drag coefficient	212
4.4.9. Parameters of interaction between bubbles and the grid turbulence	214
4.4.10. Bubble path oscillation	216
4.5. Conclusions and outlook	219
Appendix A. Euler/Lagrange approach with spatially extended coupling	231
A.1. Volume fraction of particle (VFOP) method	231
A.1.1. Determination of the interface element types	231
A.1.2. Interface element type four	231
A.2. Single particle	235
Appendix B. Stereoscopic imaging for analyzing bubble oscillation in turbulence	237
B.1. Experimental setup	237
B.1.1. Experimental facility	237
B.1.2. Tracer particles	239
B.1.3. Measurement parameters	239
B.2. Single phase up-flow	242
